Blueberry Offer No. 2

A Complete Blueberry Planting

Bearing-Age Bushes

Acid Peat Humus

Blueberry Fertilizer

Planting Instructions

Here is a **big value at low cost.** Three bearing-age, No. 1, 5-year Blueberry bushes, with sufficient Acid Peat Humus and special Blueberry fertilizer to properly plant them. Also planting directions and care.

2 5-yr., No. 1, Bearing-Age Rubel

1 5-yr., No. 1, Bearing-Age Jersey

1 bag Keith's Acid Peat Humus

1 bag Special Blueberry Fertilizer

Regular price was\$12.50

Special price **NOW ONLY** 9.85

(Sent by Exp. Approx. Wgt. 80 lbs.)

NOTE: This offer is filled with our No. 1 grade of bushes. Should you wish the No. 1-A Selected Grade (see page 5) add \$1.85 to the above special price. Please make this clear on your order.

Showing one of Keith's 5-year, Grade No. 1-A Blueberry bushes in full fruit. They get you berries **QUICK** and cost so little more.

Keith's Blueberry Bushes Can be Made to Grow and Bear Anywhere

Keith's Cultivated Blueberry bushes can be grown anywhere Roses, shrubs, etc., are grown—along your walk or drive, in your garden or out in the lawn. With our Acid Peat Humus (page 3), Special Blueberry Fertilizer (page 17) and complete instructions which come with every Blueberry Offer, it's easy to grow them.

Here's a most valuable offer—three of our 5-year Blueberry bushes, a bag of Keith's Acid Peat Humus and a bag of Special Plant Food, sufficient to properly plant them. They are 3 feet tall, with loads of fruit buds. Note large root system.

Keith's

Blueberry Offer No. 2 (Also see page 2)

Your Most Money-Worth Buy

For Prices and Description of This Offer See Page 2

Keith's Blueberry Offer No. 2 consists of two Rubel and one Jersey (see pages 4 and 6) Blueberry bushes, all five-year-old, ready-to-bear bushes, one bag of Keith's Acid Peat Humus and one bag of Special Blueberry Fertilizer ideal for the growing of Blueberries. These two varieties are hardy, productive and thrifty growers, and will bear under the most adverse conditions. This is why we use them in this offer. Give them the care suggested in our "Planting Instructions and Care," sent with each offer, and you will have surprisingly satisfactory results. IT'S EASY TO GROW BLUEBERRIES WHEN YOU SET KEITH'S 6-YR. RUBEL AND JERSEY BUSHES.

Have a Permanent Blueberry Planting

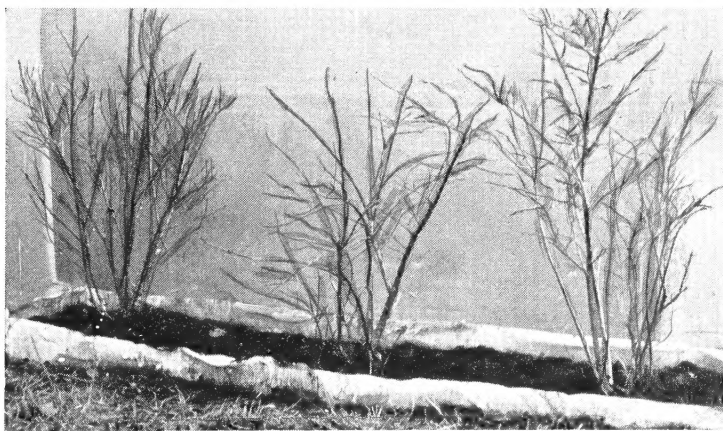

Dig a hole 10x8x4 ft. deep and cement sides and bottom to keep out soil water and tree roots. Fill with mixture as mentioned below and at left, or soil from Huckleberry marsh. In this bed set six Keith's Cultivated Blueberry bushes. To water properly, sink six 4-inch tiles even with surface and fill with soft water (no lime in it) to keep soil always moist. Lake, river, or creek waters are generally "soft." Beware of well water. Follow directions on yellow tag which comes with shipment.

Note the size of these three Blueberries from Keith's Cultivated Bushes. Three are 2 inches across. Big as Cherries. Easier and quicker grown.

To Properly Set the Above Blueberry Offer We Suggest:

Set the bushes along your walk, drive, next to the porch, on the lawn, in your garden, anywhere shrubs, Roses, etc. can be grown. Space them 4 to 5 feet apart, in holes dug 18 inches deep, 18 to 24 inches across. Mix Keith's Acid Peat Humus as directed (see below), pack 4 inches deep in bottom of hole. Place bush in middle of hole and work mixed soil and humus well around and over the roots to within 2 inches of top. Then water well (read page 17) care for bushes as directed in free "Planting Instructions and Care," sent with offer. We suggest using half-barrel (see page 8), or a box or trough shown below. Try the "Permanent Blueberry Planting" given on this page.

Three Cultivated Blueberries growing in a galvanized trough 24 by 24 inches by 8 feet long, filled with prepared soil (see page 8). Planted two years. Six-year bushes used. Note height and spread, 4 to 6 feet tall. Lots of berries.

Any one of Keith's Blueberry offers may be grown in a box or galvanized trough 18 to 24 inches by 18 to 24 inches by 8 feet long. Fill 4 inches in bottom with prepared soil (see above instructions), set in the bushes and follow instructions as in planting on lawn or garden holes. If possible use soil from Huckleberry or Blueberry marsh where they grow wild. Use Plant Food Solution in planting—page 17.

Set a Blueberry planting at your summer home. It will bear while you are there.

Keith's Acid Peat Humus Ideal for Blueberry Growing

Keith's Acid Peat Humus has the right acidity and contains the necessary plant humus for growing Blueberries. It is taken from a marsh where layer upon layer of organic matter has been deposited during ages past. We suggest mixing it at least two parts to one of your soil, or better yet leaf mold taken from under trees in woods. The more acid your soil and the more humus it contains, the less Acid Peat Moss necessary. It is also very beneficial in building and maintaining lawns, enriching the soil around Roses, shrubs, growing Rhododendrons, Holly, etc. It is a soil builder and makes plants grow.

Price: 1½-bu. bag, \$1.65; 4 or more at \$1.50 each.

Extra Peat Humus

For lasting results and for better bush growth we suggest your getting an extra bag of Keith's Acid Peat Humus to be used in planting along with that we send with the bushes when ordered in the "Ready-to-Bear Blueberry Gardens." The holes can be dug a little wider and thereby afford a larger prepared soil for the roots to expand and grow into. If you order an extra bag along with the "Ready-to-Bear Blueberry Gardens," a special price of \$1.50 per bag will be allowed.

Rubel (Early)

RUBEL—The "Old Reliable Variety"

Of all the Blueberry varieties that we have grown, the Rubel is the most sure to bear every year. It stands the most severe winter weather, has a long fruiting season (6 weeks), beginning with us in early July, and will bear more berries, one year with another, than most known varieties. Berries are large, uniform in size, with a pleasing Blueberry flavor. One of the best for pies, canning, preserves, etc. An early, constant bearer. Hardy in northern United States.

Will Grow Anywhere

Garden, Lawn, Field—Ideal for Beginners

Keith's Cultivated Blueberries will grow anywhere—a few bushes at one end of your garden, as a lawn bush (hedge or otherwise), or in your field, will surprise you with their BIG, BEAUTIFUL BLUE berries, five times larger than wild ones found in swamps, berries large as Grapes, with a delicious Blueberry flavor, and lots of them.

Rubel Bushes Bear for Years

The Rubel Blueberry is not like the Raspberry or other small fruit—one planting lasts for years.

Rubel berries (actual size).
Ideal for deep freezing.

Note: All our Blueberry bushes are sold according to AGE. A 5-year bush means it has been grown in the open field for FIVE YEARS, a 6-year bush for SIX YEARS. The 6-year Selected Bushes are more branched (bushy), larger root system and taller. They are the BEST. (See page 5).

One Planting Lasts a Lifetime

No replacing the bushes every year or so as you would Raspberries, etc. Keith's cultivated Blueberry bushes grow and produce for years. Plant once and you're through.

RUBEL PRICES:

5-Year Bushes		6-Year Bushes

25 for	56.00	68.00	

(Write us if interested in larger quantities)

ADAMS Medium Early Productive. Berries Sweet, Highly Flavored

Adams is a very reliable Blueberry with a long fruiting season. Canes are hardy, the bushes upright in growth (5 to 6 ft.) with a spread of 4 feet. Produces lots of large, attractive blue-black berries with a rich, pleasing Blueberry flavor. In yields it is at the top, right along with Rubel. One of the longest and heaviest yielders in the Blueberry family. See prices below.

ADAMS PRICES:

5-Year		6-Year	
No. 1	No. 1-A Selected	No. 1	No. 1-A Selected
Each	\$ 3.85	\$ 4.45	\$ 5.45

5 for	14.75	17.75	22.55
10 for	24.95	29.85	41.25

Notice

If you are in doubt as to the acidity of your soil for Blueberry culture, we suggest sending a sample (1 qt. or more) to your State Agricultural College for testing. Your County Agricultural Agent might also help you.

Keith's Acid Peat Humus has the right acidity, and contains the necessary organic matter and humus ideal for the successful growing of Cultivated Blueberries. In it they do their best. For complete details see page 3. Price: 1½ bu.-bag, \$1.65.

Adams—Note their size. A mild, sweet berry. (Actual size).

A RUBEL BLUEBERRY BUSH IN FRUIT

Note the clusters of large berries, many of them one-half inch across. And Rubel berries are one of the best for pies, muffins, etc. Three to six bushes will supply you with many pints of these big, delicious berries.

Keith's Bearing-Age Blueberry Bushes

6-Year CULTIVATED Blueberry Bushes

Save You Years of Waiting for Berries

Why wait three or more years, as you would have to if you were to set younger bushes, when you can set Keith's 6-year Bearing-Age bushes? These bushes have been transplanted and grown in our nursery rows for six years. They eliminate all this time and uncertainty involved when younger bushes are set. They save you at least three years. They are from three to four years older than bushes offered in terms of height. In Keith's 6-year Blueberry bushes you have **AGE, BRANCHING, HEIGHT, PRODUCTION** and **LARGE ROOT SYSTEMS** not found in the ordinary Blueberry Bushes that are not given the care that is given our 6-yr. bushes. The most saving, and the best buy for you.

GROWN IN OPEN ROWS. Keith's 6-year Cultivated Blueberry bushes have been grown in the open field for 6 years, where they have had plenty of room to branch and bush out into bushy, bearing plants (see picture at right) and are much better than bushes that are so often offered by height only. Keith is offered in terms of years **GROWN IN THE OPEN FIELD.** They save you years of time in waiting for berries, for they are "Ready-to-Bear" bushes.

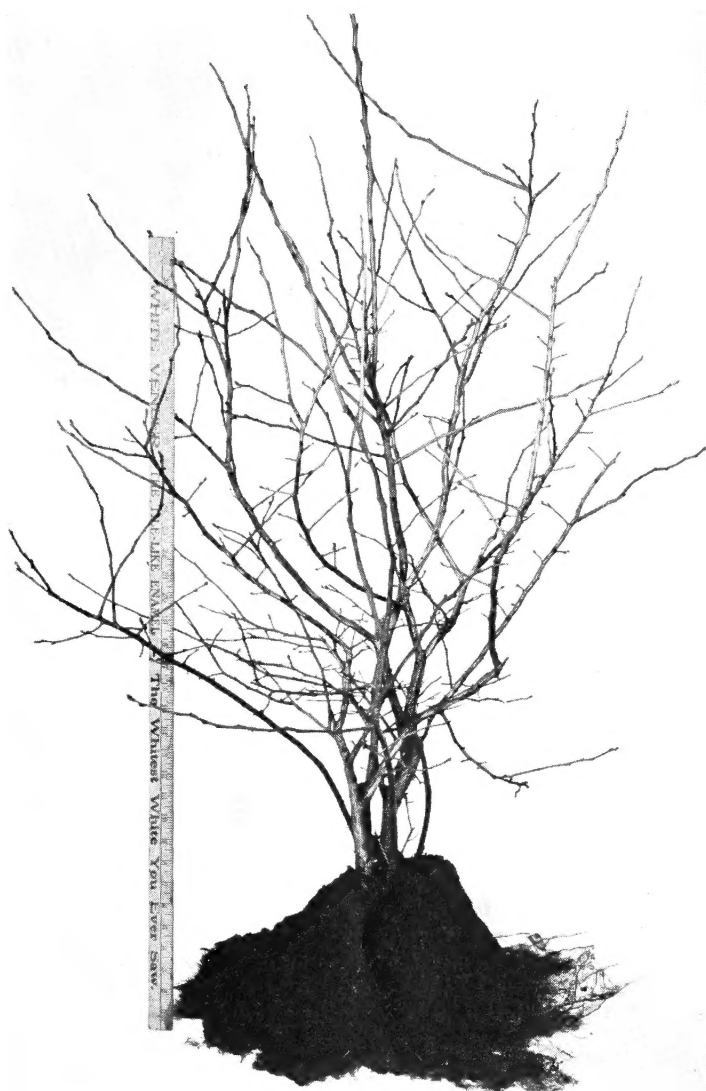

SAVE MONEY AND YEARS. Keith's 6-year, Ready-to-Bear Blueberry bushes save you at least 3 years. They are 3 to 4 years older than bushes offered in terms of height. An 18- to 30-inch bush may not be over 2 years in field growth, with few branches. Keith's 6-year bushes have **height, branching and age.** They are the best and most saving buy for you, and they cost so little more than younger bushes.

KEITH'S CULTIVATED 5-Year BLUEBERRY BUSHES

Keith's 5-year Cultivated Blueberry bushes have been grown in the open field for 5 years and have these years of growth as an advantage over bushes that are so often offered in height measurements only—bushes so often young in years. Keith offers their Cultivated Blueberries in terms of years grown in the open.

Picking Keith's Cultivated Blueberries from one of our fruiting blocks. These are the Jersey.

Here you see one of Keith's 6-Year Selected Cultivated Blueberry Bushes. Note the heavy mass of roots, and the large top growth, well branched. These bushes are so large they can be shipped by express only. The largest and best Blueberry bushes obtainable.

Keith Offers 2 Grades of Blueberry Bushes Each Saves You Money and Years of Time

KEITH'S No. 1-A SELECTED GRADE

This is our best grade of Blueberry bushes. Because of having more room to spread out in the nursery row, these bushes are well branched, larger, have more fruiting buds and branches, and larger root systems than the No. 1 grade. They are **SELECTED BUSHES.**

To have the best Blueberry bushes, those that are **more branched, larger growths, more fruit buds, and larger root systems** order Keith's No. 1-A Selected Grade. You'll save time and money. These larger growths, etc., are due to the fact that these bushes grew in the more open places in our nursery rows and thus had plenty of room to branch out. They are the **best bushes obtainable**—they are **selected** and cost so little more.

KEITH'S No. 1 GRADE

Keith's No. 1 Grade of Blueberry Bushes, whether they be in the 5- or 6-year size, are well branched and well rooted bushes. They are of bearing age and contain fruiting buds that develop into fruit during August and September. They are larger and superior to many Blueberry bushes being offered today, for they have been transplanted and grown in the open in our nursery rows, where they receive the best of care, cultivating, thus causing them to develop into well branched, large bushes, well worth your consideration.

Jersey

A "GIANT" in the Blueberry Family

(Late) Berries Very
Large—Sweet—Beautiful—Attractive

JERSEY is a large, attractive, improved Blueberry that is becoming very popular because of its extra large berries, many of them over $\frac{3}{4}$ inch across. It ripens its large berries a little later than the Rubel. We recommend Jersey very highly.

BUSHES are fast growing, semi-upright, 5 to 6 feet high. Makes a very attractive bush for lawn planting, at the same time very suitable for group planting or in rows in the garden. Should be set at least 5 feet apart in bed plantings. 5x10 in field culture.

Jersey Prices

	5-Yr. Bushes		6-Yr. Bushes	
	No. 1 Grade	No. 1A Selected Grade	No. 1 Grade	No. 1A Selected Grade
Each	\$ 3.75	\$ 4.65	\$ 5.15	\$ 6.10
3 for	10.35	12.35	13.85	16.15
5 for	16.25	18.50	21.85	25.25

One Planting Lasts for Years

Set Keith's Cultivated Blueberry bushes and you are through for years. Bushes grow and produce almost a lifetime. Need little care, just occasional thinning out and heading back of old canes and branches.

Bear During July-Aug.-Sept.

Keith's Cultivated Blueberries begin to fruit in July and keep it up until September. Ideal for those who have summer homes. See page 5.

BERRIES extra large, mild, sweet flavor, that is retained after cooking. One of the best Blueberries for fresh desserts. Excellent for shipping. Berries hang to the bushes for days before dropping—a good characteristic.

Larger Than Wild Blueberries

The berries of Keith's Cultivated Blueberry bushes are at least five times larger than wild Blueberries or "Huckleberries." All the Jersey berries shown on this page are actual size. Many of them over $\frac{3}{4}$ of an inch across.

Picking Keith's Cultivated Blueberries. This is one of our blocks of 6-year bushes.

Picking Keith's Cultivated Blueberries. This is one of our blocks of 6-year bushes.

RANCOCAS (Midseason)

One of The Best for Home Uses

RANCOCAS is one of the oldest varieties in the Blueberry "Family." It, like many of the older ones, was found growing wild in a Blueberry marsh. So outstanding were its berries, that it was "domesticated" brought in and placed under cultivation and it proved to be a very worthy variety.

THE BUSHES are hardy, make a sturdy upright growth, attaining a height of 5 to 6 feet if not kept pruned back, as all Blueberries should. Grows quite open and requires very little thinning out, as does the Pioneer.

RANCOCAS BERRIES average medium to large in size, holding a uniform size until the end of the season, which ends earlier than the Rubel because it ripens its berries more at one time. They have a deep blue bloom covering a blue-black skin color, have a mild, sweet flavor, are firm and meaty and hold their flavor after cooking. One of the best varieties for home uses.

RANCOCAS PRICES—(5-year bushes ONLY)

No. 1 Grade Bearing Age	No. 1A Grade Bearing Age	6-Year, No. 1
Each \$ 3.95	Each \$ 4.50	Each \$ 5.65
3 10.25	3 12.00	3 14.85
5 15.00	5 17.35	5 22.75

Note: In ordering Acid Peat Humus figure 1 bag for each three bushes.

PIONEER (Early) Pleasing Flavor—Extra Large

Pioneer does not grow into a tall, upright bush—it's low and spreading (4 feet high, 4 feet wide.) Produces large yields of blue, Plum-colored berries, many over 1/2 inch across (see picture at right). Bushes make fine hedge planting, or can be planted alone or in groups, and don't freeze back even at 20 degrees below zero. We have only the 5-year bushes in Pioneer to offer this year.

Pioneer Prices

5-Year Bushes ONLY

No. 1 Grade:	No. 1A Selected
Each \$4.00	Each \$ 4.75

Grow Blueberries in Half Barrel (See page 8)

Take a half barrel, or large tub and sink it in the soil even with the surface of the ground. Fill two-thirds full with a mixture of one part rich loam soil and two parts Keith's Acid Peat Humus, pack firm, set bush in middle, and fill with mixture packed well. Keep the soil always moist with rain water. See page 8.

Pioneer
(Actual Size)

Two of the many treats made from delicious Blueberries. These muffins and pie were made December 24, by Mrs. Keith, from frozen Blueberries.

MRS. KEITH'S BLUEBERRY PIE

Pastry for one double pie: 1 cup flour, 1/4 teaspoon salt, 1/4 teaspoon baking powder, 1/3 cup shortening, 4 tablespoons water. Divide into two parts. Use one for bottom and other for top crust.

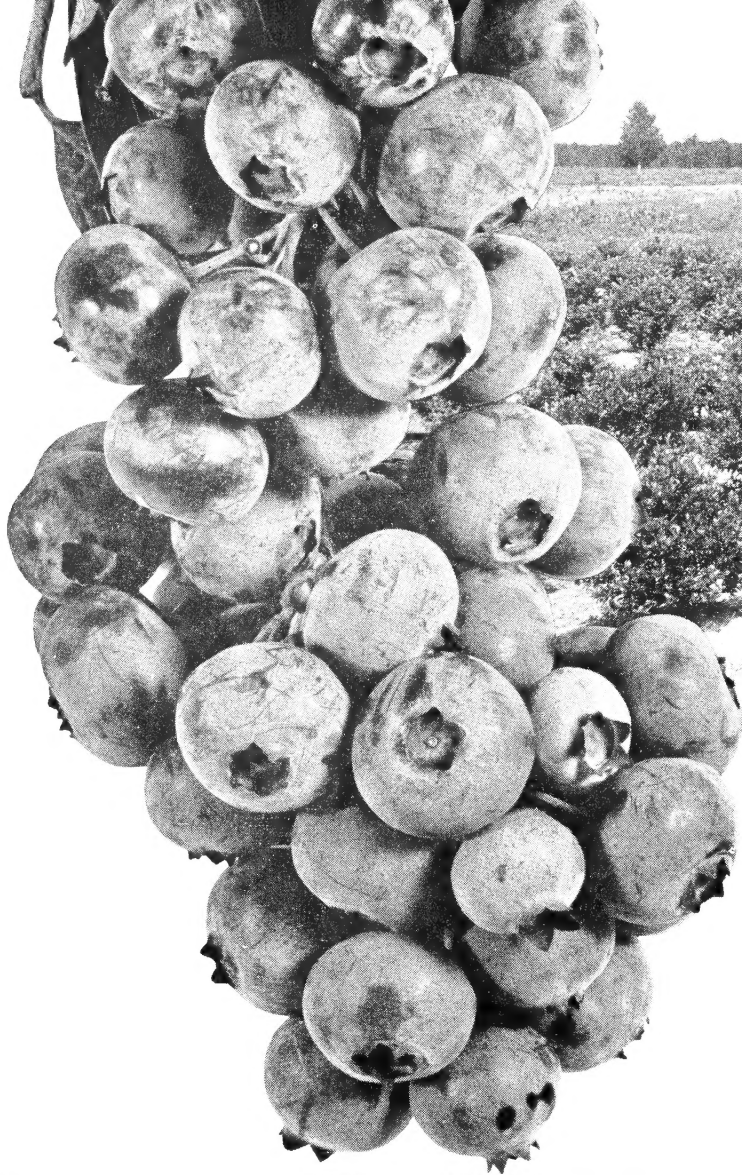

Blueberry Filling: 1 pint ripe Blueberries, 1 cup. gran. sugar (or 1 cup honey), 2 heaping tablespoons flour, pinch salt. Mix well and fill the unfilled pie shell. Dot with butter, then cover with top crust. Brush top crust with sweet milk or cream, sprinkle lightly with gran. sugar. Bake 15 minutes at 500 degrees and 30 minutes at 375, till well browned. A teaspoon of lemon juice or vinegar may be added if tarter pie is desired.

MRS. KEITH'S BLUEBERRY MUFFINS

1/4 cup butter or vegetable shortening, 1/3 cup sugar, 1 egg, 2 2/3 cups flour, 4 teaspoons baking powder, 1/2 teaspoon salt, 1 cup milk, 1 cup ripe Blueberries. Cream the butter and sugar. Add beaten egg. Sift dry ingredients and add alternately with milk. Reserve a little flour to mix with berries before adding to the batter. Bake in hot oven, 375 to 400 degrees. Blueberries can be added to any muffin recipe.

Picking Keith's Cultivated Blueberries. These bushes yield over 20 pints of beautiful, big berries as large as Cherries, and much more easily grown.

Now YOU CAN GROW PLENTY OF BLUEBERRIES

IN YOUR GARDEN, ON YOUR LAWN, ALONG YOUR WALKS OR DRIVE.
HAVE THEM FOR YEARS FOR YOUR TABLE USE, PIES, MUFFINS, ETC.

Easy to Grow

We used to think Blueberries could be grown only in low marshes. NOT SO NOW. Now they can be successfully grown, with very little soil preparation, anywhere about your yard, in your garden or in cultivated fields. They can be as easily grown as Roses or any ordinary shrub and in the same places. Those who have planted Keith's Cultivated Blueberry bushes now have plenty of berries. It's easy to have them. It's no trick at all nowadays to grow and have plenty of big, sweet Blueberries. No need trudging through wet, boggy marshes any more.

Will Grow Anywhere—Garden—Lawns— Along Walks

You can easily grow Keith's Cultivated Blueberries. At one end of the garden, on your lawn like shrubs, along your walks or drive, as a hedge planting. They will grow anywhere with little extra care.

How to Plant and Grow Keith's Cultivated Blueberries

Field Culture Remember, the Blueberry must have an acid soil (pH 4.0 to 5.1) and plenty of water. Keep this in mind in selecting your soil for commercial plantings. A drained Blueberry (Huckleberry) marsh would be ideal. Growths of White Cedar, Leatherleaf, Red Maple, etc., are indications of suitable soil. But to make sure always have the soil tested for acidity. Water table should be 30 to 48 inches below surface. Some soils are found to be too acid and this can be corrected by the addition of lime. See your county agricultural agent. Low meadow lands are sometimes suitable. Set the plants 6 feet in row, spacing rows 9 feet apart (about 800 per acre.) Write us for further information.

For Garden or Lawn Planting

Keith's Cultivated Blueberries are as easily grown as Roses or shrubs. All you have to do is to see that the soil is moist, loose and acid. To accomplish these, we suggest the following: Dig a hole 18 inches across (larger for larger bushes) and 16 inches deep, and fill half full with a mixture of one part your soil two parts acid peat, leaf mold, marsh soil, or BETTER YET, Keith's Acid Peat Humus (see below) which we guarantee for our Cultivated Blueberries. Pack this mixture in the bottom half of the hole quite firm, then set the bush in on about 3 inches of the loose mixture and fill in around the roots and on top of them with the mixture until the hole is full. Pack down very firm, then water thoroughly until the whole mixture of soil from the bottom of the hole to the top is thoroughly soaked with water, rain water preferred. DON'T USE WATER WITH LIME IN IT. It will sweeten the soil. The soil must be kept acid, and don't let it become dry, and you can grow lots of Blueberries. COMPLETE PLANTING INSTRUCTIONS AND CARE COME WITH EACH SHIPMENT.

Grow Blueberries in Half Barrel

Blueberries may be grown in a half barrel, large tub or box, the same way, or may not be submerged in the soil. We suggest the latter. The container is used to prevent outside roots (tree, shrub etc.) and soil water from entering into the prepared soil. Sink the container in the soil so the top is even with the soil surface. Fill two-thirds full with a mixture of 1 part rich loam and 2 parts Keith's Acid Peat Humus, pack firm, set the bush in the middle and fill full, working the soil well around the roots. Pack firm and water with water void of lime. Keep soil acid and moist. Follow suggestion under Garden Culture.

Keith's Acid Peat Humus

This Acid Peat Humus has the right acidity and contains the necessary organic matter and humus ideal for the successful growing of the Cultivated Blueberry. In it they will grow and produce their big, beautiful berries. We recommend it for this purpose. It should be mixed at least 2 to 1 (in volume) with ordinary soil. The more acid and the more humus in your soil the less Keith's Acid Peat Humus necessary. It is also very beneficial in building a lawn, enriching your garden soil and the soil around shrubs, Roses, etc. **Price:** 1½-bu. bag, \$1.65; 4 or more bags at \$1.50 per bag. Sent by express unless otherwise instructed. No discount, not prepaid.

Growing Keith's Cultivated Blueberries in a half barrel.
See suggestions at right.

Mastodon (Everbearer)

Still the Best Everbearing Strawberry

Many varieties of the everbearing Strawberry come and many go, but the Mastodon still is with us as the best and most dependable everbearer today. We have grown and tested new varieties of everbearers as they "came out," but we still recommend the Mastodon.

Made Good for 26 Years

Twenty-six years ago we first grew the Super-Mastodon and from that time, we have found it to be the best and most true everbearer. You can't beat Keith's Mastodon.

Begin Fruiting 90 Days After Planting

Give Keith's Super-Mastodon plants a chance to make good, give them "plenty to eat and drink" and they sure will produce the berries for you, beginning in 90 days after planting and continuing until cold freezing weather.

Why Keith's Super-Mastodon Plants Are Best

- 1.—Begin to bear 60 to 90 days after planting.
- 2.—Bear well in garden or in field culture.
- 3.—Bear three crops instead of one: summer and fall, next spring, and next summer and fall.
- 4.—Most productive of all everbearers.
- 5.—Berries are well flavored, fine for table uses, canning, preserves, quick freezing, deep freezing.

If you are wanting berries this coming summer and fall, then set Keith's Super-Mastodon plants this spring.

Set plants after "Keith's New Way,"—see top page 17.

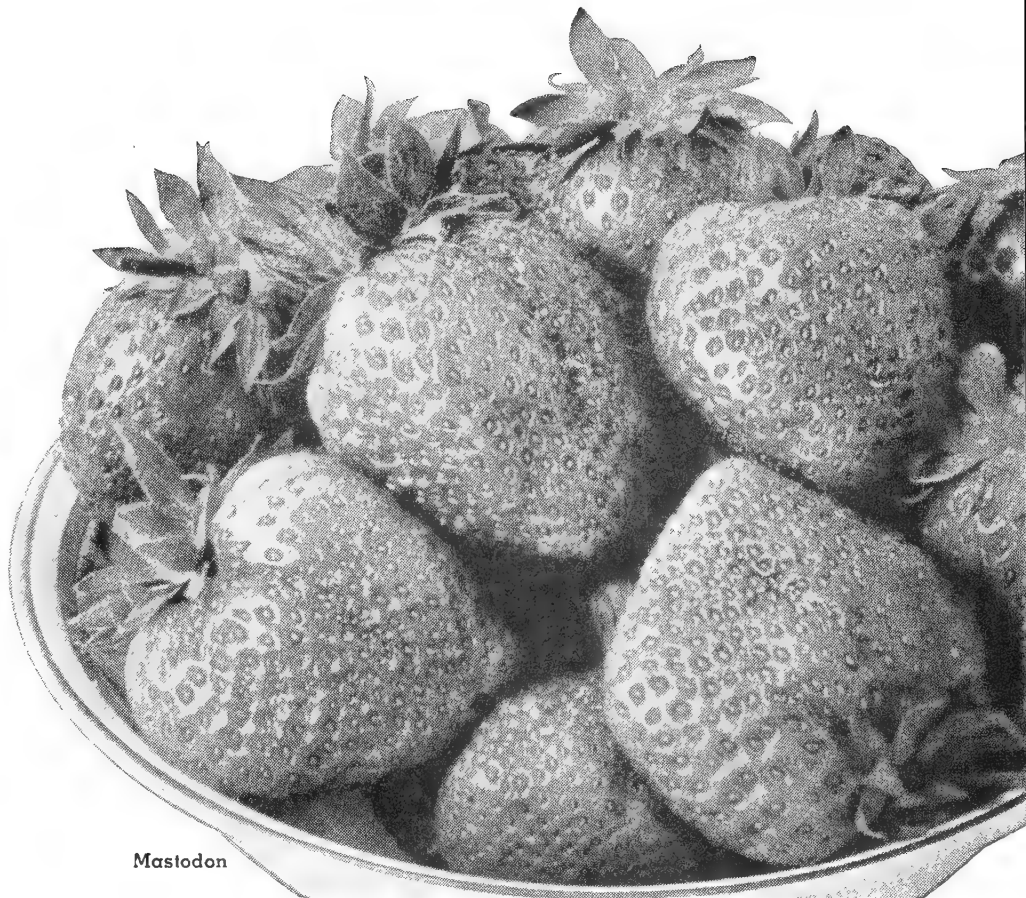

Set Your Strawberry Plants the Keith "New-Way." (See page 17.)

You need very little space to grow all the Strawberries you need for table use and for canning, deep freezing, etc., when you follow Keith's "New Way." Also make use of the Special Fertilizer (see page 17) during planting and after, and watch the plants grow, and GROW. It's a new way for better yields.

Make Quick Money With Keith's Super-Mastodon Plants

Give Keith's Super-Mastodon plants all they want to "eat and drink" and they certainly will bear a lot of berries for you. They begin to bring you in money in 60 to 90 days after you set them out and bring top-notch prices. Here's what they can do for you:

\$60 from a bed 33x35—M. Marshall (Mich.).
 350 quarts from 300 plants—P. R. Amber (Calif.).
 \$213 from 1/10 acre—J. Barlow (Mich.).
 \$380 from 1/4 acre—Mr. Parrish (Mich.).
 300 plants supply a family of 8—M. Kurtz (Ohio).
 576 quarts per acre per day (\$216)—Keith's record.
 \$20 from a small bed (200 plants)—W. Jones (Pa.).

Mastodon

**\$1,440
Per Acre**

Then Mr. L. Parrish (Mich.) harvested at the rate of \$1,440 per acre. He finds Keith's Super-Mastodon to be a money-maker.

**100 Plants
Yield Gallon
Per Week**

Gentlemen: "Those 100 Mastodon plants have averaged a gallon a week since July 18th. It's now November 14th. C. R. PAINTER, Pa.

PRICES of Keith's Super-Mastodon Plants

50 plants 2.95
100 plants 4.95
200 plants 8.95
300 plants 9.85
500 plants 14.75
1000 plants 27.50

STREAMLINER (New Everbearer)

This coming summer will be the third season for this new Everbearing Strawberry. It certainly made good last summer. Those who were fortunate enough to get Streamliner plants found it to be a true everbearer, with large, beautiful berries with a sweet, unique Strawberry flavor which many Strawberries do not have. You'll get something different when you get Streamliner. Get started with Streamliner this spring.

Here's What You Get When You Grow Streamliner

- 1.—Large, sweet berries with a pleasing, unique flavor.
- 2.—An attractive glossy red color, red to the core.
- 3.—Firm texture. Handles, ships, and "deep freezes" well.
- 4.—Hardy, healthy, thrifty plants.
- 5.—Not "choosy" as to soil—just so the plants have plenty to "eat and drink."

Three Crops Instead of One

Set Streamliner plants this spring and pick berries in July until fall, also the next spring and summer. **Three crops instead of one, all from one planting.**

Streamliner Prices

12 plants ..\$1.75	200 plants \$11.00

50 plants .. 3.75	500 plants 22.50
100 plants .. 7.00	1000 plants 40.00

Catskill (Midseason to Late)

Big Crops of Big Berries

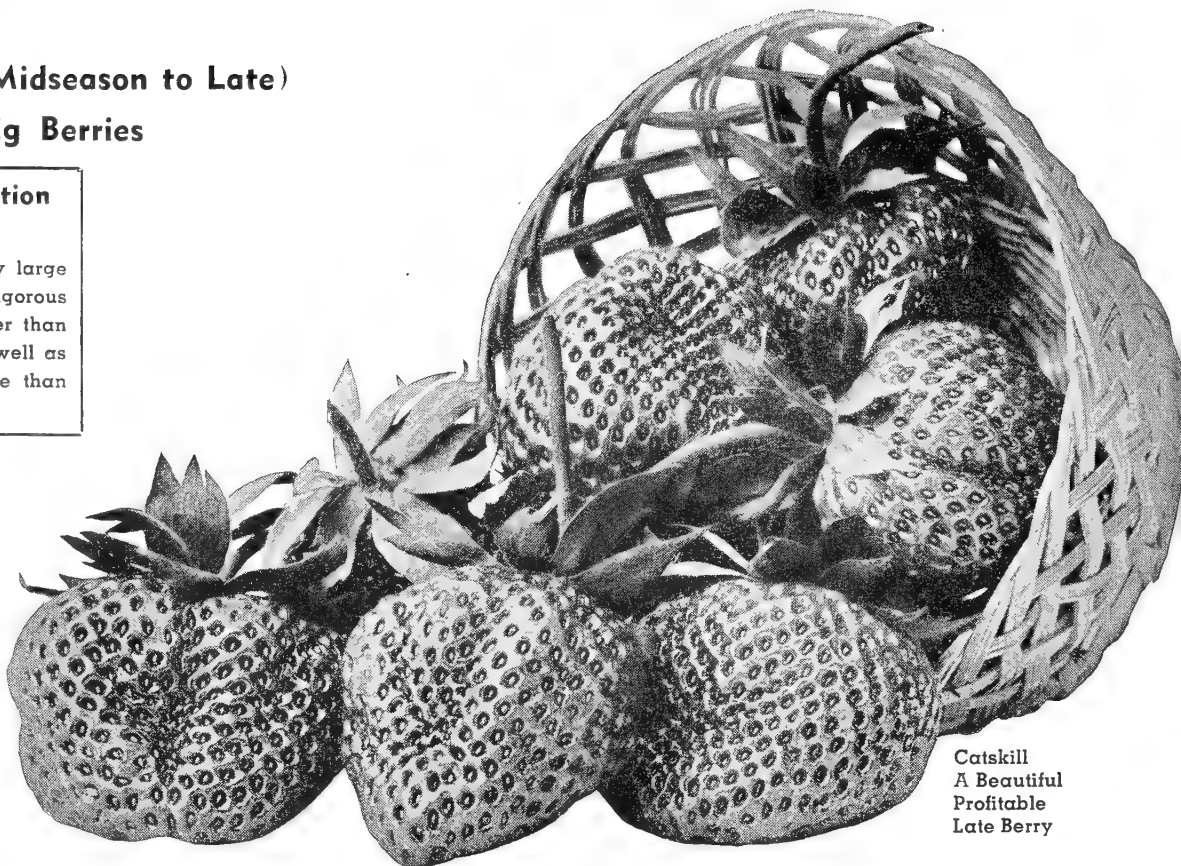

New York Experiment Station Says:

"Catskill is notable for being very large and very productive. Plants are vigorous and free from leaf spot. Ripens later than Premier and is of better quality as well as being larger. Much more productive than Dorsett and Fairfax."

Here are a few of the characteristics which make Catskill famous:

1. Berries very large, firm, attractive.
2. Bring highest prices on markets.
3. Very productive, outyield others.
4. Plants free from disease (leaf-spot).
5. Vigorous grower.
6. Does well in any garden or field soil.

Catskill is certainly making good since its introduction by the New York Experiment Station (see quotation above) and now is planted by growers along with Premier as a reliable paying variety. Catskill is adapted to a large range of soils and climate like the Premier. You sure will like Catskill after you have fruited it, either in your garden or under field culture.

Catskill
A Beautiful
Profitable
Late Berry

Catskill Berry

Catskill berries are large to very large, attractive glossy red, medium sweet, and good flavor. If you haven't seen or grown the Catskill you have a big surprise coming.

DUNLAP (Early)

The Nation's Best Known Berry

Enjoyed by more people than any other Strawberry. The most inexpensive variety to set. A sure grower and a sure producer. You sure can make good when you set Keith's Dunlap plants.

SET KEITH'S DUNLAP BECAUSE:

- 1.—**DO WELL** in any garden soil. Reliable for beginners. Everybody's berry—everywhere.
- 2.—**PERFECTLY HARDY**. No winter-killing, and does well in heavy or light soils.
- 3.—**PRODUCTIVE**. Will yield paying crops where others fail. Still wonderfully productive under garden or field culture everywhere.
- 4.—**ALWAYS PRODUCES** a wide row of healthy, productive plants.

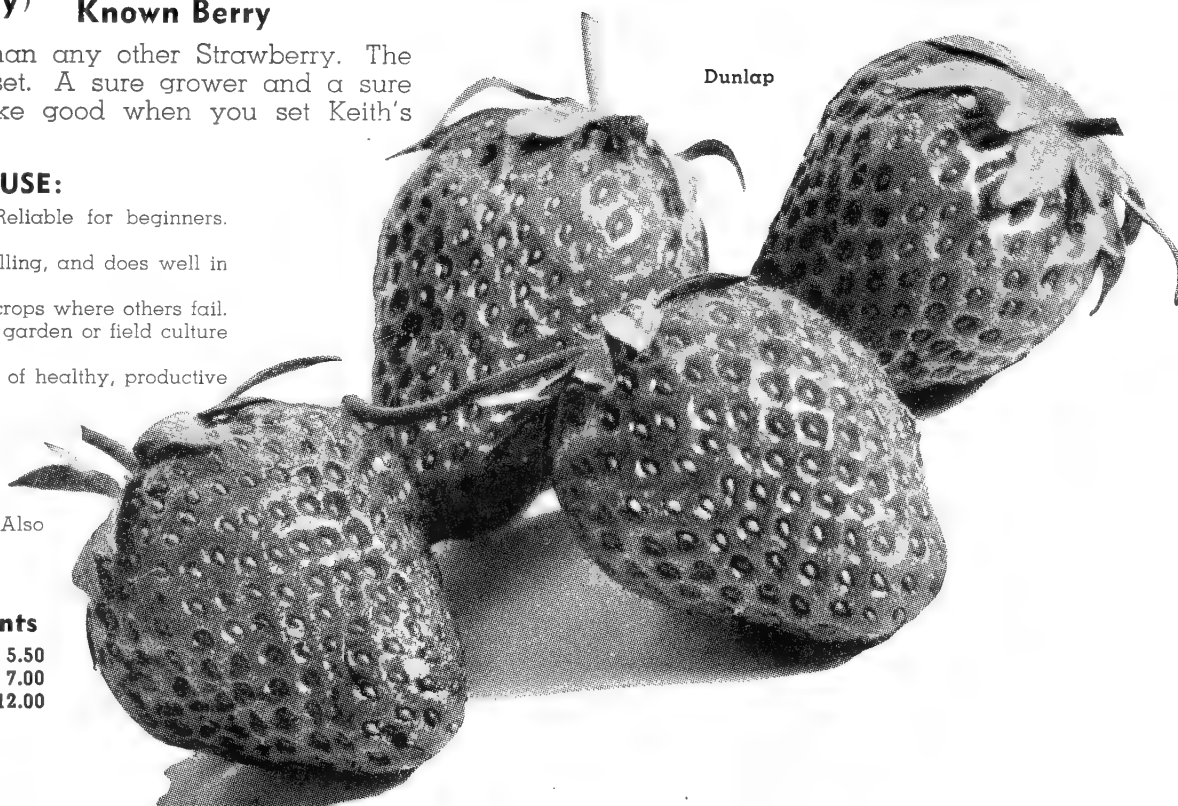

THE BERRIES

Firm, sweet, dark red all through. Good lasting Strawberry flavor. Ideal for table use, preserves, etc. Also for "freezing."

Dunlap

The Giant New Robinson

A Giant in the Strawberry Family

A New Spring Bearing Variety

- 1.—Berries large, sweet, wonderful.
- 2.—Attractive glossy red.
- 3.—Demands highest prices.
- 4.—Very large yet uniform.
- 5.—Ripe berries in 28 days after blossoms.
- 6.—You can't go wrong with Robinson.

You will win every time at the Strawberry "game" if you set Keith's vigorous, twice-government-inspected Robinson plants.

Outsells All Other Strawberries

Although recently introduced, this attractive new berry has proved itself to be a more valuable berry than the Premier because it is more productive, berries average larger, sweeter and ever so much better for preserves, canning, etc. Outsells all other Strawberries on the Benton Harbor market. We know you will be more than pleased and surprised with this new berry. The best Strawberry growers are planting it for their money maker.

Prices

25 plants	\$ 1.10
50 plants	1.75
100 plants	2.90
200 plants	5.35
300 plants	7.50

1000 plants	14.00

Premier (Early)

Premier—Best Early Variety You Can't Miss With Premier

- 1.—Very early.
- 2.—Berries large, attractive.
- 3.—Long fruiting season (three weeks).
- 4.—Very productive.
- 5.—OK for home use and market.

Set Keith's Premier plants and you will be on the early market 8 to 10 days ahead of your neighbors. Early berries bring big prices, you know.

Produces Large Yields

Keith's Premier plants often yield over 2 quarts of attractive berries for each plant set. Think of picking 18,000 to 24,000 quarts per acre. This can be done on one acre of average Strawberry soil when set with Keith's vigorous, productive Premier.

KEITH'S BIG 4 STRAWBERRY GARDEN

From the 4 Leaders Listed on These Pages (10 and 11.)

THINK OF IT—A Strawberry Garden for Less Than \$5.00.

Takes a space only 1/3 the usual size (see page 17.) Bears from early to late spring Strawberry season. 100 certified plants, 25 in each variety at a very low cost. Just think of having a Strawberry garden for less than \$5.00. Pick around 150 qts. all for less than \$5.00. Couldn't do this out of the grocery. And the berries will be always fresh.

Keith's Blueberry Offer No. 3 A Three-Variety Combination

Keith's biggest offer in Blueberry bushes: 3 field-grown 6-year, No. 1 bushes, freshly dug and packed. Also includes 1 bag of Acid Peat Humus (page 3) and 1 bag of Special Blueberry Fertilizer (page 17), sufficient to properly plant and fertilize the bushes. Planting instructions come with each offer.

1 6-Yr. Jersey, No. 1 Grade.
1 6-Yr. Rubel, No. 1 Grade.
1 6-Yr. Adams, No. 1 Grade.
1 Bag Keith's Acid Peat Humus.
1 Bag Special Blueberry Fertilizer.
Regular price ~~.....~~ \$17.05
Keith's Complete Combination Offer
(3 Bushes, Humus, Fertilizer Instructions)
Price ONLY ~~.....~~ \$13.35
(Approx. Shipping Wgt. 85 lbs.)

NOTE: This offer is filled with our No. 1 Grade of bushes. Should you wish the No. 1-A Selected Grade (page 5), add \$2.35 to the above special price.

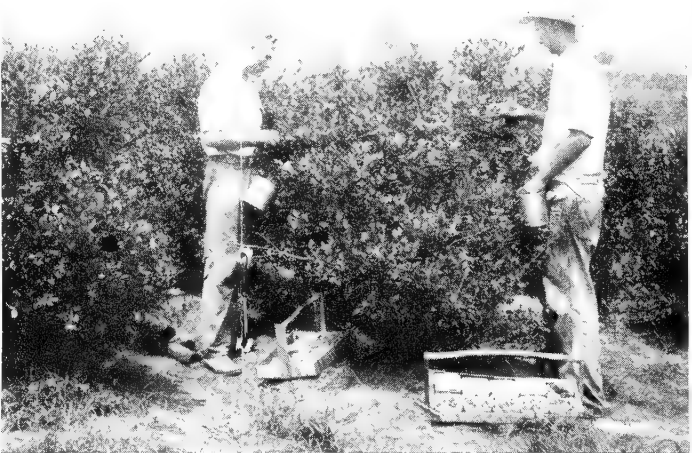

Fertilizer

This year we are supplying our customers, besides the Acid Peat Humus, with Special Blueberry Fertilizer to be used in growing our Blueberry bushes. It's a highly concentrated, complete fertilizer (see page 17). The Acid Peat Humus (page 3) also comes with all Blueberry offers.

Spacing of Bushes

In a permanent planting of Keith's Cultivated Blueberry bushes, for garden or lawn purposes, should be spaced at least 4 feet apart. Closer spacing will cause crowding. The wider spacing will also allow soil building as bushes get older and root spread becomes greater. Rows should be 10 ft. apart in field culture.

Picking Keith's Cultivated Blueberries

Bushes were planted 7 years when this picture was taken. Note height and size. Yield was around 20 pints per bush of big, beautiful berries large as Cherries, but much more easily grown.

Two New Strawberries

Sparkle Late Spring

Dependable
Ideal for Quick Freezing

We offer our customers for the first time this new Strawberry. It is a quality berry, ripening about a week later than the Premier (page 11). The berries are a sparkling bright, Strawberry-red, uniform in shape and medium to large.

The New Sparkle

The birthplace of this new Strawberry is at the New Jersey Experiment Station, where it first gained importance, and at the New York Experiment Station it was found to be one of their best late varieties, ripening a week later than the Premier.

We have fruited Sparkle for four years and find it a dandy all-around berry. We find it resistant to the red stele Strawberry disease. It grows seemingly unmolested by this disease, where other varieties are killed out. It yields heavy crops. We know you will be more than surprised when you see, pick, and eat Sparkle.

SUPERFECTION

The latest in the everbearing Strawberry family. Here's a NEW one you can't afford to miss. The berries are highly flavored, rich red, fine for table, preserves, deep freezing. Sweet, juicy, red all the way through.

Superfection

Berries in 90 Days

Set Superfection in spring and pick luscious, juicy, beautiful berries in 90 days or less, and from then on until snow flies, also bears the following spring at the usual Strawberry time. Have berries this summer and fall, also next spring, summer and fall.

Have a Permanent Blueberry Garden

To have a Blueberry garden with marshy conditions, we suggest the following: Dig a hole 10 feet long, 6 feet wide and 4 feet deep, and fill it with the excavated soil mixed with Keith's Acid Peat Humus (1 part soil, 2 parts Humus) or soil from a Huckleberry marsh. Use lots of leaf mold from woods. It helps. In this bed set six Cultivated Blueberry bushes. To hold water and keep the tree roots and soil water out, cement the bottom and sides. To water the bed, set six 4-inch tile flush with top of surface and pour rain water into them to keep soil always moist. Mulch the surface with leaf mold or Keith's Acid Peat Humus.

Keith's Cultivated Blueberries Are Easy to Grow

Now you can grow all the Blueberries (often mis-called Huckleberries) you need right in your garden, along walks, next to the garage, any place you would grow shrubs or Roses. All you have to have is (1) an acid soil, (2) moist soil, and (3) liberal amount of humus in the soil. The kind of soil does not make so much difference as long as the above conditions are present. If your soil is not sufficiently acid (should be between 4.0 to 5.1 pH) it can be made so by adding Keith's Acid Peat Humus. It will also correct the humus deficiencies.

Free Instructions

With each Blueberry offer you receive easy-to-follow instructions covering, (1) Garden Culture, (2) Barrel Culture, (3) Field Culture, (4) Pruning, Care, etc. These instructions make the growing of Keith's Cultivated Blueberries EASY.

THE NEW SUNRISE

- 1.—Earliest of the reds—at least two weeks earlier than Latham.
- 2.—Comes early, lasts late in season.
- 3.—Keith's 2-year plants (see next page) fruit about all summer.
- 4.—Berries bright glossy red, pleasing flavor, fine for table or deep freezing.
- 5.—Plants very hardy, no winter-killing.

Those Delicious, Highly Flavored SUNRISE Berries With Unexcelled Quality and Texture

PLANT SUNRISE FOR HOME USE

SUNRISE, with its high quality, wonderfully flavored berries, the best for PIES, PRESERVES, JELLIES and JAMS, stands away out in front as a Red Raspberry for home use. There is no better.

Not Only Early But Late

Keith's SUNRISE plants, with their "everbearing" habit of sending up new canes during the summer with loads of berries on them, makes it possible for you to have those delicious berries about all summer. They "keep coming on," sometimes until cold weather—almost an "everbearer," we say. That's SUNRISE for you. Prof. Clark has a word for you along these lines. (See top page 15.)

HAS STOOD THE TEST FOR TWENTY-SIX YEARS

SUNRISE was originated by the U. S. Department of Agriculture back in 1923, and has been under the most rigid tests for some 26 years. Dr. Geo. Darrow, of the U. S. Department of Agriculture, along with Prof. Clark, finds it a fine berry—"Worth Crowing About."

If you haven't grown the SUNRISE Red Raspberry, you haven't experienced a real Red Raspberry yet. Its earliness, its high quality and texture, its unique flavor, its long fruiting season, its disease-resistance, and its hardiness, are something for you to look forward to when you set Keith's Twice-Inspected, Certified Sunrise Plants.

We have them for you in two sizes and two grades. (See next page.)

EARLY EXTRA QUALITY

"Something to Crow About"

The New

SUNRISE

RED RASPBERRY

SAVE A WHOLE YEAR

and

Have Berries This Summer

Set Keith's TWO-YEAR, Once-Transplanted SUNRISE Red Raspberry Plants

From two-year SUNRISE transplants set in the spring we picked berries way into the late summer. We have SUNRISE plants, just like those we planted, for you.

We transplanted them last spring and grew them all summer for you. Now you can have two-year plants instead of the one-year size. SEE DIFFERENCE in illustration at right.

BERRIES THE FIRST SUMMER Why Wait Two Years?

Note the fruit buds on the canes. These buds develop into berries for you this coming summer.

Also note the difference in the size of the root systems of the two-year and the one-year plants. This large root system makes the two-year plants a better plant for you. These **two-year transplants** give you more berries sooner, and a bearing Red Raspberry garden quicker. No sitting around and waiting two years for your berries. Keith's two-year SUNRISE transplants **start right off the first summer.**

SPACING THE PLANTS

Whether two-year or one-year plants, space them 2½ feet apart in the row for garden culture and 3 feet apart for field culture, and space the rows 4½ feet apart for garden culture and 6 feet apart for field culture. All canes that have passed through the winter and fruited the next summer should be cut off close to the ground right **after they are through fruiting.** Keep the soil well cultivated or mulched with straw, leaves, sawdust, etc.

KEITH'S NO. 1A SELECTED PLANTS

These plants are selected from the more open nursery rows where they have grown larger, have more branches, more fruit buds, and larger root systems. We **SELECT** them for you, and these **Selected Bushes** cost you so very little more. Why not set the best—Keith's No. 1A Selected Plants.

This New Raspberry Has

Earliness—High Quality of Fruit— Hardiness—Disease Resistance

Mr. Black of New Jersey says:

"SUNRISE is as early as Chief and almost as large as Latham. Much better quality, and berries do not crumble." He finds SUNRISE two weeks earlier than Latham.

Prof. Clark of N. J. Experiment Station says:

"The special value of the SUNRISE is its earliness. Has a long fruiting season in New Jersey—in most cases SUNRISE will continue to produce some berries even after Latham is practically finished."

From U. S. Dept. of Agriculture Bulletin 397:

"SUNRISE has shown resistance to low temperatures in midwinter, whereas Latham and some other varieties were severely injured.

"The resistance of SUNRISE to leaf curl and cane diseases is probably an important factor in its ability to withstand low temperatures. It has been more resistant than Latham to anthracnose, leaf spot and spur blight.

"The berries **pick easily, of fine, firm texture, juicy, non-crumbly, mild sub-acid in flavor, with a good Raspberry aroma, and better in quality than Latham** . . ."

Plant at left is a 2-year Sunrise transplant; the other is a 1-year size so commonly offered. What a difference. Note the root system, and the branched top bearing lots of fruit buds (A).

THE Latham (Midseason to Late)

A Leading Commercial Red Raspberry
HARDY—PRODUCTIVE—RELIABLE

- 1.—BERRIES: Large, firm, attractive bright red, don't fade after picking.
- 2.—Easily picked—berries grow in the open, don't stick to stems—easily picked off.
- 3.—Don't crumble during or after picking.
- 4.—Firm, attractive—ships, hauls and sells at top prices.
- 5.—CANES: Sturdy, strong, hardy.
- 6.—Grow upright, don't droop over.
- 7.—VERY PRODUCTIVE.
- 8.—A LEADING COMMERCIAL AND HOME VARIETY—all State Experiment Stations, State and Government Fruit Men will recommend the LATHAM.

LATHAM PRICES

1-Year, No. 1

12 plants ... \$1.95	200 plants .. \$14.00
25 plants ... 3.00	300 plants .. 25.00
50 plants ... 5.00	500 plants .. 39.00
100 plants ... 8.50	1000 plants .. 65.00

2-Year Transplants

6 plants \$1.50
12 plants 2.50
25 plants 4.00

THE LATHAM RED RASPBERRY

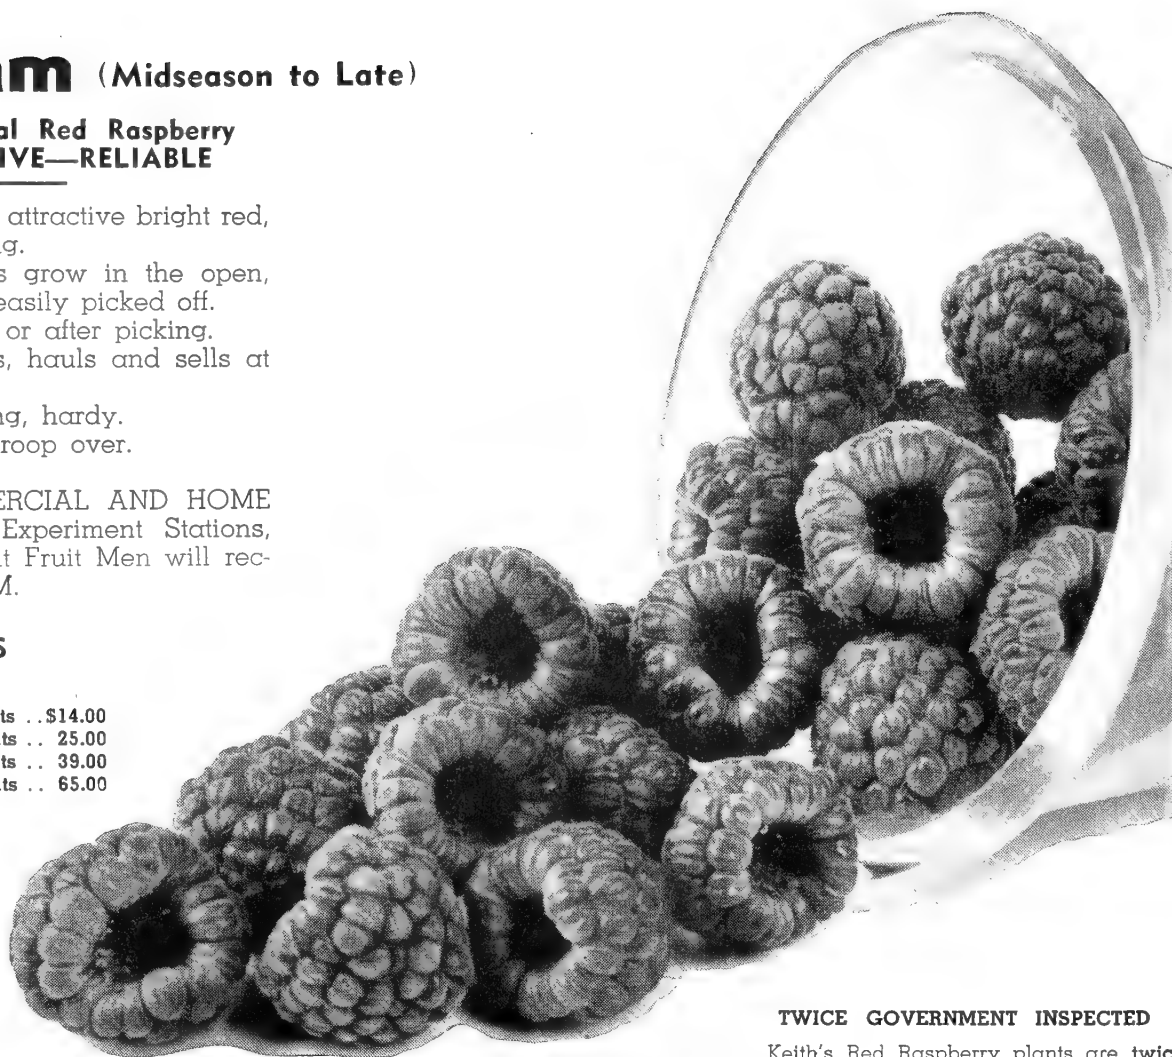

will grow in any soil that produces good Corn, Oats, Wheat, garden crops. All it needs is attention to see that weeds and grass don't take possession. It also is hardy, the canes withstanding the northern winters, except like there sometimes comes on in Northern Minnesota and Dakota. Better try the Sunrise where the winters are extremely cold. It's more hardy than the Latham.

Latham—An Old Standby

Latham is to the Red Raspberry "family" as the Dunlap is to the Strawberry "family." For years it has done well in the garden and fields. "Be Sure With" Latham. It's the old reliable Red Raspberry. Those who grow Latham are satisfied.

Planting Instructions Page 18

Turn to page 18 for planting instructions and a New Way to use Special Fertilizer.

TWICE GOVERNMENT INSPECTED

Keith's Red Raspberry plants are twice inspected by state inspectors. You will find them vigorous, exceedingly healthy and very productive. It takes only a few (25) plants of this kind to give you all the red Raspberries you can use in a family of three to five. For your garden set plants 2 ft. apart in rows, 5 ft. wide.

Grow Strawberries in Boxes or Barrels

Save Space—Get Lots of Berries

One planting and YOU ARE THROUGH. No weeding, no cultivating, yet you can grow lots of fine berries in a small space. Use any good variety, but we suggest Keith's Super-Mastodon (page 9), or Keith's Streamliner (page 9) everbearers. In spring varieties we suggest Robinson, Premier, etc. (Page 11.)

BARREL CULTURE

Use any common wooden or iron barrel, sugar barrel suggested, and bore 2-inch holes 6 inches apart over its surface. Two in bottom for drainage. Fill the barrel with good rich soil and tamp well. Set plants through holes just like in open soil, using sharp broomstick to make the holes and tamp well around roots. Don't cramp or buckle roots in planting. Set plants 6 inches apart around and over top of barrel. It will take about 75 plants to plant a sugar barrel.

FOR WINTER PROTECTION: Stack fodder, etc., around barrel or box. If straw is used, hold it in place around barrel or box with lattice or screen, woven wire, etc. Place on after freezing weather. Remove in spring when plant growth starts.

BOX CULTURE

Sometimes it is more convenient to make, or use ready-made boxes. Boxes should be about 18 inches wide, 4 feet deep, and 6 to 8 feet long, whatever size is most convenient. To keep the box sides from bulging, wire back and forth through sides. Make holes and plant as in Barrel Culture, 6 inches apart. Plants required depends upon size of box.

Keith's New-Way to Grow Strawberries

Save Space—Save Time
Grow Four Times as Many Berries

A new and better way to grow more and better berries. Large areas are NOT needed. Grow four times more berries from same size plot. Why use more space?

Keith's New-Way of growing Strawberries requires only one-third the space required by the old ways and you can harvest four times the berries. Space three parallel rows one foot apart and set the plants one foot apart in each row. If you wish a wider bed (4 ft.) set four rows. We suggest this width. Then bed 25 feet long will take just 100 plants, 25 to the row. The bed will be 4 feet wide and 25 feet long.

Allow young runner plants to take root in between mother plants (the plants you set) so all plants, young and old, will be spaced 6 inches apart. Keep all runners thereafter cut off. Mulch between plants with straw, lawn clippings, etc. Mulch keeps down weeds and holds moisture.

See New Fertilizer

and how to use it during and after planting. Read about at bottom of this page.

KEITH'S NEW-WAY STRAWBERRY GARDEN

(Read description below)

25 Dunlap	\$1.00	SPECIAL \$4.80
25 Premier	1.10	
25 Catskill	1.10	
25 Mastodon (Evbr.)	1.85	
100 Plants	\$5.05	For postage see page 21

Next Above is One of Keith's New-Way Gardens for You

This New-Way Strawberry Garden will sure meet your family berry needs. It consists of 100 plants in four leading varieties (see offer above). Will take a plot of ground only 25 feet long by 4 feet wide. Plants are set 12 inches apart in 4 rows spaced 12 inches apart, 25 plants per row. Surround the bed with 4-inch boards set on edge to make a frame to hold mulch of straw, etc. This saves moisture, keeps down weeds, improves appearance.

This New-Way can be followed out on larger scale by making the bed longer or by making more beds with a path one foot wide in between each.

Ra-Pid-Gro A New Complete Fertilizer Contains Not Only 1, but 13 Different Plant Foods.

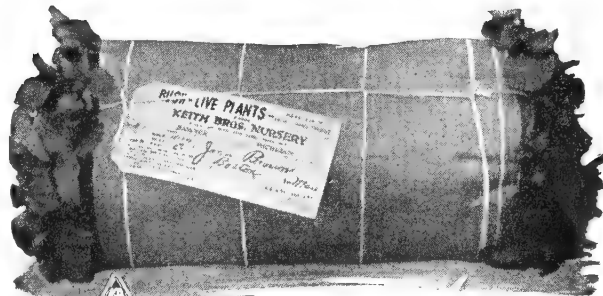

Ra-Pid-Gro produces rapid, healthy growth in plants, shrubs, trees, flowers, etc. Use it anywhere plants are grown, outdoors or in. Often plants that seem to be dead, respond to this "miracle" fertilizer. Plant foods in Ra-Pid-Gro are available at once for they are all readily soluble in water, thus taken up by plants at once. Use Ra-Pid-Gro and watch your plants "shoot" out a vigorous, healthy growth at once. It contains 13 different plant foods, each needed for the best growth of your plants.

Shows Effects of Treatment

The Strawberry rows on left were treated when planted and watered afterwards. Those on the right were not. Note difference in growth. Ra-Pid-Gro gets the plant foods to plants when they need them, right after planting. See (How to Use it) at right.

Here's Your New-Way Strawberry Garden
100 Plants, 4 Varieties (See Offer Below at Left)

HERE'S YOUR 100 PLANTS

These 100 plants are all ready for your garden, a 25-foot Strawberry bed, a possible 100 quarts of sweet, luscious berries. All for \$4.80. (See offer below.)

One of Keith's Popular Strawberry beds. This Strawberry bed requires only 100 plants and a small space 4 feet wide and 25 feet long. Bears enough for average family.

Ra-Pid-Gro

This new plant food makes plants grow and produce. Don't miss ordering some for your plants.

Easily Prepared and Applied

One pound makes 22 gallons of plant food. Just dissolve the one pound in 22 gallons of water and it's ready to use. Water your plants with this solution as you would use any water, making sure it gets down to where the roots can get it.

"Kill Two Birds With One Stone"

The solution (1 lb. to 22 gals.) can be used to water and feed your plants at the same time. Do this and watch your plants grow. No waiting half the summer for your plants to get started. They start QUICK when "watered and fed" with Ra-Pid-Gro.

How to Use Ra-Pid-Gro

Ra-Pid-Gro is easily applied. Dissolve it in water at the rate of 1 pound to 22 gallons and it is ready to use. Dip roots of the plant in this solution just preceding planting. Sift loose, fine soil on the roots to help hold the solution to the roots during planting. After planting, soak the soil around the plants with the same solution. This is made easy by making a trench 6 inches from plant. Fill it twice with the solution, and when it has soaked away, fill with loose soil. With row crops, like Strawberries, make a trench 3 inches along side of row. "Water and feed" the plants in this way during planting, and repeat in about two weeks.

Dipping Roots of Plants

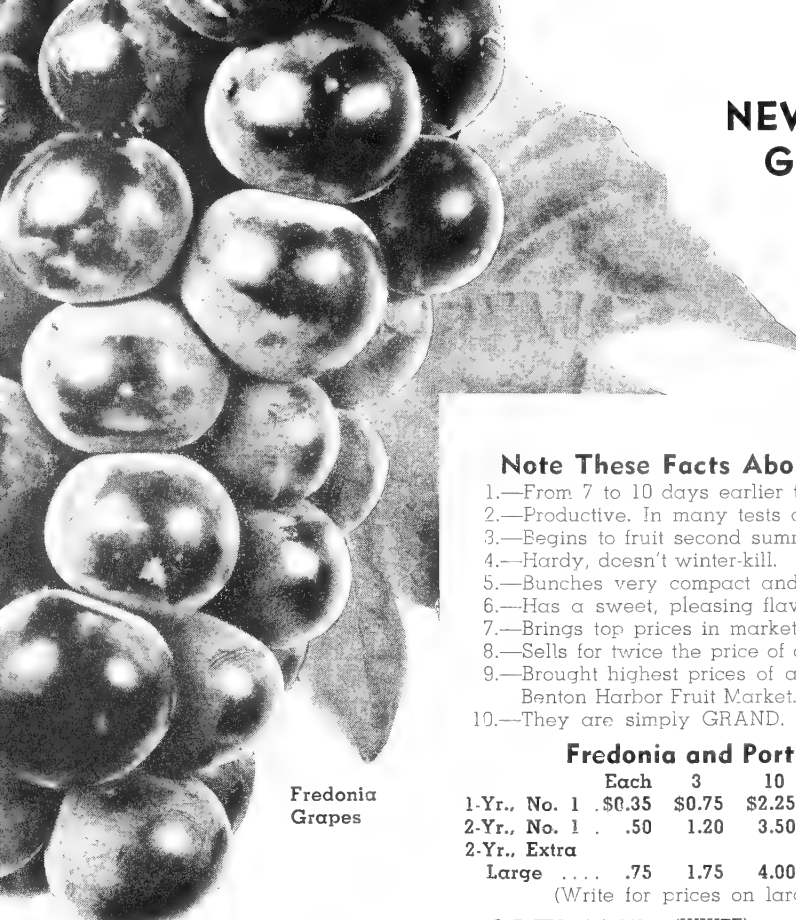

This picture shows how the roots of shrubs, Raspberries, Grapes, Roses, Blueberries, etc., may be dipped before planting. The same solution (1 pound of Ra-Pid-Gro to 22 gallons of water) should be used to "water and feed" the plants after setting. See How To Use It, at left.

PRICES:

1-lb. bag (makes 22 gals.) (postpaid)	\$1.25
2-lb. bag (makes 44 gals.) (postpaid)	2.35
5-lb. bag (makes 110 gals.) (not prepaid)	4.65
10-lb. bag (makes 220 gals.) (not prepaid)	8.70

Write for special prices on larger quantities.

Note: We have Ra-Pid-Gro in stock at all times.

NEW BLUE GRAPE

Fredonia

Extra Early
Productive—Sweet

Originated and Thoroughly Tested at the
New York Experiment Station

Ask **ANY** State Experiment Station or Agricultural College about the FREDONIA Grape and you will learn of its suitability—one of the best early Grapes.

Unexcelled for Home Uses

FREDONIA'S sweet, foxy, delicious flavor makes it the BEST for table use, eating out-of-hand, or for making jellies, jams, Grape juices, etc. We know you will be delighted and more than surprised when you taste and use Fredonia. We have fruited Fredonia for six years and we can recommend it very highly, as one of the best Grapes for home and commercial uses.

Most Profitable for Commercial Purposes

FREDONIA is 7 to 10 days earlier than the Concord, and its very compact bunches of large, beautiful blue berries, coated with a velvety "bloom," makes it a ready "seller" anywhere it is offered for sale. Its extra earliness gets it on the market when prices are high. There's money in growing Fredonia. Vines are vigorous, thrifty growers, loaded with those large, compact, beautiful bunches. (See picture below.)

New Grape FREDONIA. Picture shows loads of those beautiful, large bunches. Fredonia is a WINNER.

Note These Facts About the Fredonia

- 1.—From 7 to 10 days earlier than Concord.
- 2.—Productive. In many tests out-yielding Concord.
- 3.—Begins to fruit second summer.
- 4.—Hardy, doesn't winter-kill.
- 5.—Bunches very compact and attractive.
- 6.—Has a sweet, pleasing flavor.
- 7.—Brings top prices in markets and stores.
- 8.—Sells for twice the price of other blue Grapes.
- 9.—Brought highest prices of any blue Grapes on Benton Harbor Fruit Market.
- 10.—They are simply GRAND.

Fredonia and Portland Prices

	Each	3	10	25	50	100
1-Yr., No. 1	\$.035	\$0.75	\$2.25	\$4.50	\$ 8.00	\$15.00
2-Yr., No. 1	.50	1.20	3.50	6.25	11.50	19.50
2-Yr., Extra						
Large	.75	1.75	4.00	9.00	17.00	29.00

(Write for prices on larger quantities.)

PORTLAND (WHITE) (New Early)

Portland is a new early white Grape. In the white Grapes it is what the Fredonia is in the blue varieties. It's early, firm, wonderful flavor, hardy—doesn't freeze back like other varieties, nor is it subject to black rot like other Grapes. We have fruited the Portland for 10 years and find it a worthy, profitable variety. We will hereafter set it for our white variety. It bears well, ships well, eats well, cans well and a dandy for making Grape juice, etc. We know you'll like the Portland. See Prices below.

For Home — For Markets

IT'S CHEAPER to grow Grapes than buy them. Takes only a half dozen vines or less, planted along the garden fence, over a shady trellis at the back door or in some other out-of-the-way place, to supply all the Grapes you will need for home consumption. And note how little the few plants will cost you from Keith.

CONCORD

Blue. Midseason to Late

Very Reliable—Always Bears

Here's another old standby. Very hardy, good grower, productive every year. The leading commercial variety. However, the Fredonia is becoming as popular, but it is an early Grape, and out of the way by the time the Concord ripens. See prices below.

NIAGARA

(WHITE)
(Midseason)

An old reliable white Grape, very sweet, productive, with an attractive catchy flavor. None better for wines, juices, and the like.

PRICES:

	Each	3	5	10	25	50	100

(Write for prices on larger quantities)

PARADISE ASPARAGUS. A new Asparagus from California.

Our 2-year roots begin sending up shoots which you may cut the next spring. No waiting around two or three years to have tender, fresh Asparagus when you plant Keith's 2-yr. Paradise roots—they send up thrifty shoots in one year. Paradise is an excellent variety for home and commercial uses. The shoots (tips) are thick and tender, with that rich Asparagus flavor. Fine for "cold packing," for it holds its flavor and tenderness after freezing.

Prices:	12	25	50	100	250	500
1-Yr., No. 1 Roots	\$0.75	\$1.00	\$1.75	\$3.00	\$6.50	\$11.50
2-Yr., No. 1 Roots	1.00	1.75	3.50	4.85	8.85	15.00

MacDONALD RHUBARB. Also called by some "The Mammoth

Red MacDonald." Produces tender, juicy, (not tough, stringy) stalks 3 feet tall and over an inch in diameter. Produces these large, tender, red stalks (not green and tough like some varieties) from early spring well into summer. Seldom, if ever, goes to seed. At MacDonald College in Canada, where it originated, Prof. Bunting says: "very highly colored, a dazzling, attractive stalk of large size, productive, very tender and succulent, excellent quality, valuable for pies and desserts." When cooked it's as red as Cherry juice—just wonderful. We offer STRONG DIVISION roots, the kind that will send some usable stalks this summer.

Prices: No. 1 Strong Root Divisions, 65c each; 3 for \$1.95; 6 for \$3.85; 12 for \$7.75; 25 for \$12.00.

For Grape culture directions, see page 20.

SPECIAL GRAPE OFFER

Here's your opportunity to get an ideal Grape Arbor for home uses. 4 different kinds, 4 different flavors, 3 different seasons.

One each: Concord, Fredonia, Niagara, Portland.

SPECIAL PRICE (2-Yr., No. 1 Plants), postpaid

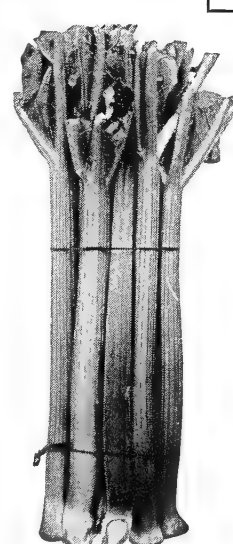

\$1.35

TWO OFFERS FOR \$2.25.

PLANTING INSTRUCTIONS

Asparagus: Dig trench 12 inches deep, 16 inches wide in well drained location. Fill trench half full with top soil mixed one-third with rich compost or well-rotted manure. Pack well, then spread roots out flat on this flat surface and cover them with 3 inches of the soil mixture. As the Asparagus tops (shoots) come up fill in the remainder of the trench. Space roots (plants) 12 to 16 inches apart in trench. For winter mulch, cover the bed with compost, barnyard manure, or chicken manure, to be raked off in early spring.

Rhubarb: Follow same instructions as for Asparagus except set plants 24 inches apart and not so deep.

Bush Cherries Make a Beautiful Flowering Shrub in the Spring.

BLACK CHERRIES from BUSHES

Hansen's New Improved BUSH CHERRY

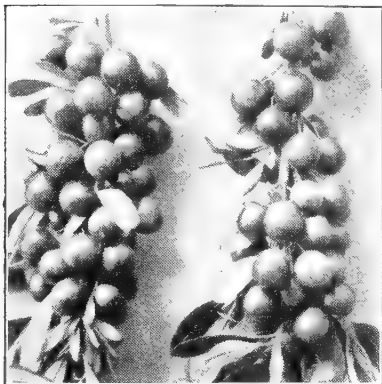

Easy to grow, hardy, always produces. Can be used as a hedge, planted alone, or among other shrubs. Beautiful when in bloom. Yields lots of black, Plum-shaped Cherries. Delicious for pies, jams, etc, like tree Cherries. Set about 3 feet apart. Keep pruned like shrubs.

A Two-Way Bush

Hansen's New Improved Bush Cherry is a two-way bush: (1) a beautiful, attractive flowering bush in the spring; (2) a useful, productive bush in the late summer, loaded with useful black Cherries.

Blooming Size Bushes

This year Keith offers you flowering and fruiting size bushes, two and three years old. Why wait a year or more to enjoy the beautiful, white flowers and the useful black Cherries of this Bush Cherry? Set Keith's 2- and 3-year bushes and you will have flowers and Cherries this coming spring and summer.

Branches Loaded With Black Cherries. Hansen's Bush Black Cherries are Useful for Pies, Jellies, etc.

Have Your Order Shipped Early

Before Hot Spring Weather

Plan to set your plants early this spring. Have them in the ground by the time growing spring weather arrives. They will then be all ready to start growth and won't have to be disturbed. Early set plants always do best. Read "Have Your Plants Shipped Early" on page 21.

And How to Use it—See Page 19.

Mother's Strawberry Garden

Mother's Strawberry Garden

Wouldn't every mother be delighted to have a little Strawberry garden from which she could pick many quarts of delicious berries? Here we offer a Strawberry Garden made up of varieties we would send our mother if she were alive. Varieties that will produce lots of fresh, delicious, rich red berries for table use, also berries suitable for preserves, jellies, jams, etc.

Order One For Your Mother

"Dogzoff"

**Eliminates the Dog Pest
Keeps Dogs Away From
Flowers, Trees, Etc.**

85c

"DOGZOFF"

**DOGS DON'T HANG AROUND
WHERE YOU PUT "DOGZOFF"**

"Dogzoff" can easily be sprinkled around where you don't want dogs or cats. They stay away from it. Why not protect your evergreens, shrubs, flower beds, furniture, etc., from cats and dogs. It is easy with "Dogzoff."

When used according to directions, which come with each package, "Dogzoff" does not injure plants, trees, flowers, furniture, etc.

"DOGZOFF" is not a poison.

PRICE:

85c per bottle.

SPECIAL

1 package of Dogzoff, Mole Killer and Lantu, as listed on this page, postpaid for

\$3²⁵

MOLE KILLER

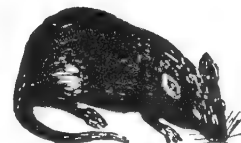

"No Fussing" around by mixing baits, setting traps, when you use this Mole Killer. Easily dropped in mole holes. One application and you're through. It does the rest—KILLS Moles—they ROOT no more.

All you have to do is to locate the mole's runway, make a small hole down into it with a pencil or sharp stick, drop the Mole Killer (like little peanuts) through the hole, pinch the hole shut and you are through. Moles come along, eat the "killer" and they're through. They bother NO MORE.

This is the Mole Killer that is so effectively used on golf courses, park lawns, etc., for it is found to do the work of ridding these places of moles.

PRICE:

\$1.25 per 3 1/2-oz. package, postpaid.

LANTU THE MIRACLE RAT KILLER

Contains the "KILLER" developed by the U. S. Government during World War II. Now released for the first time.

It is estimated that there are 250 million rats in this country. Food and property damage is over 500 MILLION DOLLARS. What's the damage and loss done about your place by rats? Why allow this loss and damage when you can easily stop it by using LANTU.

LANTU contains that deadly rat killer "ANTU" developed by the Government during World War II. The city of Boston rid 5,574 city blocks of rats by using this "killer." Read the October, 1946, issue of Reader's Digest about this deadly rat killer "ANTU," which is the killer in Lantu.

Kills rats by bringing about a dropsy of the lungs, causing lungs to actually fill up with fluid. Choking sensation causes rats to seek fresh air—they usually die outdoors.

LANTU is ready mixed for use. Rats eat LANTU readily—one lick of it kills them.

Humans, livestock, poultry and pets would have to eat "absurdly large amounts to be harmed."

PRICE OF LANTU:

8-oz. can, \$1.25, postpaid.

Paymaster

A NEW Spring Strawberry

Several years ago we started out to develop a Strawberry that would be as good as Premier in yield, but with a hardier plant, more runners, and a berry that would not go to pieces when cooked.

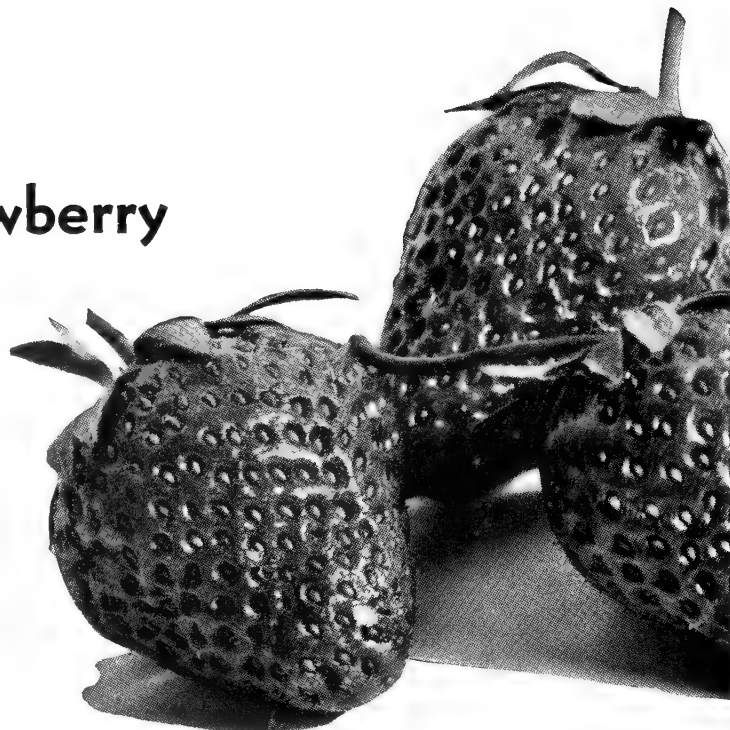

After crossing different varieties without getting what we were after, we crossed the Gem everbearer on the Premier. There were over 3,000 seedlings that grew from this cross, and from the start there was one that was outstanding. We selected this from the others and grew it in a fruiting row and found that it was just the Strawberry that we were after. It's our Paymaster.

JUST WHAT WE WERE AFTER

This new Strawberry, the Paymaster, proved to be just the berry we were after, a variety that would yield like Premier, but would be more resistant to diseases, produce more runner plants under average conditions and not cook to pieces like the Premier in canning, etc. We were very fortunate to get just the berry we were after. It's our Paymaster.

TWO OUTSTANDING PARENTS

What better parents could there be back of Keith's Paymaster than the Premier and Gem? The female part of the cross was the Premier, the leading commercial spring Strawberry; known and liked by thousands of berry growers. The other parent (male) was the Gem, a leader in the everbearing Strawberry family. So you see this new Strawberry "child" has outstanding parents which have passed on to it their outstanding characteristics, size, yields and attractiveness of the mother (Premier), and disease resisting, plant production, firmness and suitability for cooking, of the father (the Gem everbearer.)

PAYMASTER plants are hardy, resistant to "Yellows" and more disease-free of leaf spot and red stele than Premier.

PAYMASTER berries are large, firm, rich in flavor and color which hold up during cooking. They also hold their shape in cooking, do not "cook up" like Premier. Yields longer.

Prices: Because of our small stock of Paymaster plants, we cannot allow more than 50 plants per customer. **12 plants \$1.25; 25 for \$2.35; 50 for \$4.00.**

KEITH'S SUGGESTIONS FOR GROWING STRAWBERRIES

SOIL. Any good soil that will grow a paying crop of Corn, Wheat, Oats, Potatoes will grow Strawberries, but the most ideal is a rich, moist, cool, sandy loam. It should be well drained, and not in a low frosty location. Clay or gravelly soils are also good for Strawberries but organic matter should be added by plowing under plenty of straw and the like.

SOIL PREPARATION. Thoroughness is very essential. Plow the soil 8 to 10 inches deep and do so as far in advance of planting as possible, thus allowing the soil time to settle well before planting. Harrow and disk frequently so the top layers become mellow yet firm.

ENRICHING THE SOIL. Barnyard manure is always considered best, but is not always available. If you have it, apply 15 to 20 wagon loads per acre before plowing, and disk well into the soil then plow under. Apply 5 to 7 loads of fine, well rotted manure to the top after plowing, and disk and harrow this well into the top layers. On a smaller scale, use 4 to 5 bushels per sq. rod. Chicken manure may be used, but it is best to mix 1500 lbs. of it with 500 lbs. of 16% acid phosphate and apply at the rate of 25 lbs. per sq. rod. In using **COMMERCIAL FERTILIZERS** apply 1000 to 2000 lbs. of a 4-16-4 fertilizer per acre. On smaller lots use 15 to 25 lbs. per sq. rod. Apply to the top soil and disk in like the manure. Do not place fertilizer in the hole in setting plants. Apply in a shallow trench along each side of the row, averaging two teaspoonfuls per plant, at least 2 inches from the plant's base.

SETTING THE PLANTS. Set as early as possible in the spring. Fall (Oct.) planting may be practiced in those sections where the soil does not freeze over 6 inches deep during the winter. Fall plantings should be mulched. All this can be avoided by early spring planting. Space the plants 18 inches in rows spaced 3½ to 4 feet apart (field culture), and 16 to 18 inches by 3 feet in garden culture (see page 21.) Set the plants so the crown is just even with the top of the soil surface and pack soil very firm about the roots. There should be no air space around the roots.

CARE AFTER PLANTING. Keep the blossom clusters picked off spring everbearing varieties, but with the everbearers, allow those to remain that show up after 5 or 6 weeks after planting. Keep the soil well stirred around the plants. If weather is dry and hot, water alongside the row in a trench. Refill same after water has soaked away. Train the runners in the row, spacing them 3 to 4 inches apart. No piling upon each other. For best garden results, follow suggestions on page 17.

WINTER MULCH should be placed on after the soil freezes 2 to 3 inches deep. Use straw or other coarse material that will not pack down and smother the plants. Apply 3 to 4 inches thick and take part of it off in the spring when the plants show growth. Place it between the rows for mulch to keep the berries from becoming sandy during rains.

SUGGESTIONS FOR GRAPE CULTURE

Grapes may be grown in any **well-drained** soil that is fertile enough to produce profitable field crops, or any good garden soil. They may also be grown along a line or back yard fence, training the vines on the fence or wire, pruning out the old vines as suggested for field culture mentioned herein. Plow the soil in the early spring, or the fall before. Plant in spring, disk and harrow soil well before planting.

Space the rows 9 feet apart and set the plants 12 feet apart in the row. For light soils or gardens set 8 by 10. Dig the hole at least a foot deep and large enough to prevent clamping or crowding roots. Pack the soil firm about the roots, using the top soil.

Train all vines the first year to a stake. The second year set posts between every other plant (2 plants per post), staple wire to post about hip high and tie one vine to the wire. Use the best one that grew the year before. The third year add another wire, 16 inches above the first, and train one vine each way on each wire. Follow this system each year using the vines (canes) that grew the year (summer) before for the "arms", one per wire, 4 in all. For a spray schedule, consult your county agricultural agent.

How to Grow Black Raspberries

Set plants in spring 3½ feet apart in rows spaced 5 feet (garden) to 7 feet (field) apart. Keep ground well cultivated or mulched (4 to 6 inches of straw, sawdust, etc.) to keep down weeds and grass. Cut out old canes as soon as they are through fruiting, take from garden and burn. Nip ends off new green shoots in spring when they are 18 inches high, causing them to branch. This prevents long "weepy" canes. In spring trim branches on canes back to 8 to 10 inches, and long "weepy" canes back to 3½ feet.

Planting Instructions for Red Raspberries

Set Latham plants 2½ feet (garden), 3 feet (field), in the row and space the rows 5 feet (garden), 6 feet (field) apart. The bushes may be kept in the "hill" by cutting off all the new shoots that come up between the plants you set, or you may have a "hedge row" by allowing the young shoots that come up in the row between the set plants to grow and develop into individual bushes. After fruiting, cut out all the old canes that fruited, leaving the young shoots that come up from the base of the plant to remain and make fruiting wood (the top) for the following year.

In Ordering Consult the Following Information for Customers

Here's What WE Ask You To Do:

1. Order early to avoid delay in getting your order out on time.
2. Use our order blank. Fill all information asked for. This is VERY IMPORTANT.
3. Be sure your name and address are written plainly.
4. Recheck your order for mistakes in varieties, money sent, postage, etc.
5. Make your letters short and to the point. Long, rambling letters are always confusing, take up valuable time and require more writing.
6. If it's necessary to write us about your order, or order a second time, BE SURE TO RETURN the card we sent you in acknowledging your order. VERY IMPORTANT!
7. Read carefully page 21 in this berry book.

STATE GROUPS for Parcel Post

For your convenience in determining Parcel Post costs we make four groups of States as follows:

Group No. 1 includes Mich., Ohio, Ind., Ill., Wis.

Group No. 2 includes Ia., Mo., Pa., Minn., N. Y., Del., N. J., Va., Tenn., Ky., Md., D. C.

Group No. 3 includes N. and S. Dak., Nebr., Kans., Okla., Ark., Texas, Mont., Wyo., Colo., N. M., La., Miss., Ala., Ga., Fla., N. and S. Car., Me., N. H., Vt., Mass., R. I., Conn.

Group No. 4 includes Idaho, Utah, Nev., Ariz., Wash., Ore., Calif.

Note what group your State is in, then refer to Parcel Post Table below for postage to add if your shipment is to come by Parcel Post.

PARCEL POST TABLE

(Note—Should you send too much postage, plants will be added to balance)

To have your Parcel Post shipment come to you with postage paid, add to your order postage required as shown herein:	States in Group No. 1	States in Group No. 2	States in Group No. 3	States in Group No. 4
Strawberry, 1-yr. Asparagus. For first 100 plants or less	20c	27c	40c	60c

- 1.—**USE ORDER BLANK**, filling in all information.
- 2.—**ORDER EARLY**. Orders shipped as requested. First come, first served. To get plants shipped on requested date order early. You also get first choice of varieties, and benefit by our discounts.
- 3.—**SHIPPING SEASON** from late March until late May, depending on season. Also in fall after we have had cold enough weather to harden plants.
- 4.—**PLANTING SEASON**. Set plants early as you'd make early garden and from then on until after Corn planting time. (When oak leaves are about size of squirrel's ears). Early set plants always do best.
- 5.—**REMITTANCE**. Post Office Money Order or Express Money Orders are safer for you and most convenient for us. Send them when possible. But we gladly accept your check. Bank drafts, etc. Letters containing currency should be REGISTERED. C. O. D. shipments will be made if one-third is sent with order.
- 6.—**YOUR PROTECTION**. We guarantee safe arrival, but do not hold ourselves responsible for negligence or damage in transit. We replace orders to the extent of damage or loss if customer sends within five days statement from Express Agent or Postmaster showing extent of same. Parcel Post shipments must be insured if loss is to be recovered. Raspberry and other cane plants travel at customer's risk ordered shipped after May 1st and Strawberry plants after May 15th.
- 7.—**EXPRESS SHIPMENTS**. Owing to the increase in express rates, we suggest that only the larger packages, such as our Blueberry offers, Acid Peat Humus, 500 or more Strawberry plants, and similar shipments be sent by Express. Express shipments always travel better than Parcel Post, and the shipment always carries insurance against damage or loss.
- 8.—**PARCEL POST SHIPMENTS**. Small orders can be sent as cheap by Parcel Post, especially into States in Group 1 and 2. Distant shipments are more expensive. Parcel Post shipments are not insured, this costs extra. The Parcel Post Tables give postage to add to cost of order. See below.

HAVE PLANTS SHIPPED EARLY

Have your plants shipped early while weather is still cool, because all plants should be shipped before they take on any spring growth so that you receive and get them planted in the most dormant condition possible, we suggest:

- 1.—Have your plants shipped early and heel them in so you will have them as soon as your soil becomes suitable for planting.
- 2.—Get your ground ready just as soon as spring weather permits, and then get the plants set out as soon thereafter as possible. Get them set while they are still dormant. DON'T WAIT until the weather gets hot. Have them shipped early and heel them in, then you will always have them on hand.
- 3.—That you especially have your Blueberry, Raspberry, Rose bushes shipped early. Read paragraphs 4 and 6 above.

Keith's Thornless Boysenberry A New Giant Truly Thornless Boysenberry

This New Boysenberry is the result of a cross between the Loganberry, the Blackberry, and the Raspberry, and has inherited the best qualities of each. And the berries are mammoth in size, many over 2 inches long.

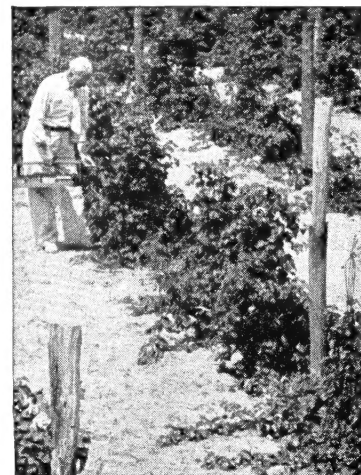

This New Giant Boysenberry—

- 1.—Is entirely thornless.
- 2.—The berries are sweet, dark maroon-red (see back cover), with an excellent, pleasing flavor.
- 3.—It's as easily grown as Blackberries.
- 4.—Very productive—mature plants produce around 10 quarts of berries.

(NOTE: For further information, etc., see back cover (page 24) in colors)

Boysenberry—Cultural Directions

Set plants 4 inches deep in rows 6 feet apart (field culture 8 ft.) Set plants 6 feet apart in row (field culture 8 ft.) Be very careful not to break the tender sprout coming up from the middle of the root mass. Keep soil well stirred around and between plants. Grow some other crop (Potatoes, Tomatoes, etc.) between plants first year. Allow the young canes to run on ground. In fall, train them in the row and cover lightly with straw, in sub-zero climates. Hold straw in place with a little soil along edges. Remove mulch in spring when buds begin to "shoot" and tie the canes to wires stretched over posts 3 feet high. Picture at right shows taller posts with two wires stapled to side. First wire 2½ feet, second wire 4½ feet. Cut out old canes as soon as they are through fruiting and remove and burn. Allow the young canes to run on the ground and handle in fall as mentioned above.

Here you see Thornless Boysenberry canes tied up to and trained to wires stapled to the side of posts set 12 feet in the row, a post to every two plants.

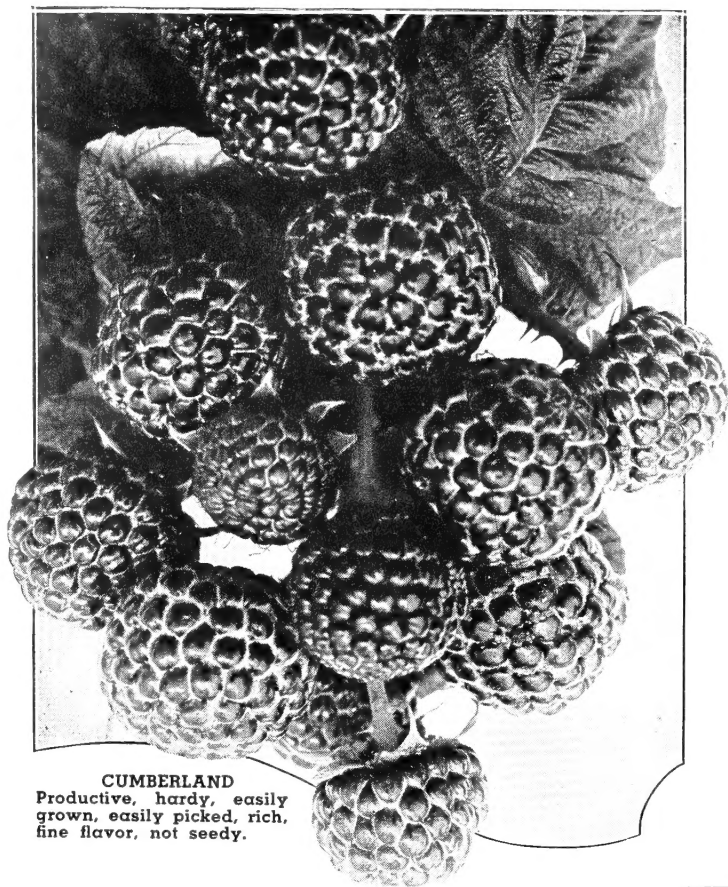

Have your Boysenberry plants shipped early. Read top of this page.

SPECIAL OFFER

So you may have a start with Keith's Thornless Boysenberries, we offer you:

6 One-Year Thornless Boysenberry plants for ONLY **95c** Post-paid

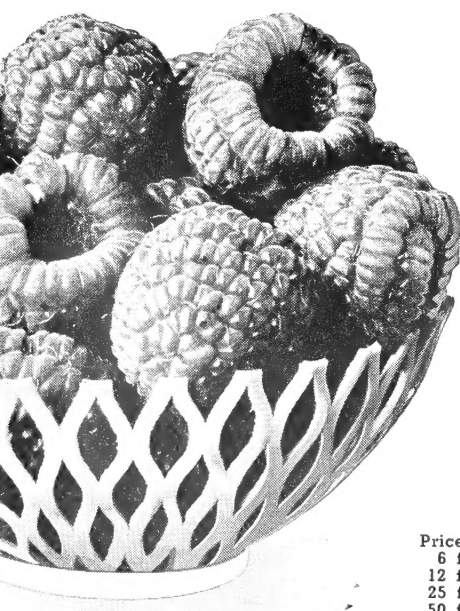

CUMBERLAND
Productive, hardy, easily
grown, easily picked, rich,
fine flavor, not seedy.

Grow Keith's Black Raspberries for Home or Market

3c
Per
Qt.

Why be without all the fresh black Raspberries you need for pies, jellies, jams, deep freezing, when just a few plants at so little cost can supply you with all the berries you need at so little cost per quart. And the plants can easily be grown in your garden, along the back yard fence, along the drive, or in many out-of-the-way places. One planting lasts for years, and there is very little care needed. Just the berry for your summer home. Bears while you are there.

INDIAN SUMMER New Everbearing Red Raspberry

The new everbearing Red Raspberry way ahead of any yet introduced. It not only bears in the summer and fall but in the spring also—two crops a year. It produces more, bigger and better berries during summer and fall than any other "red" berries. Large, attractive, rich red Raspberry flavor. Color and flavor hold up in cooking.

THE **Cumberland** (Midseason) Black Raspberry

A Leader for Years—Still Going Good

Cumberland is the leader in the black Raspberry "family." Growers plant more Cumberland than any other variety. WHY? Because Cumberland is a very reliable yielder of large crops of marketable berries. You can depend upon Cumberland when others fail. The canes are hardy and strong—don't break over easily with their loads of big berries. Cumberland is also a very suitable berry for home use—berries large, not seedy, well flavored, and there are lots of them. We know Cumberland will please you in every way.

Keith's 2-Yr. Morrison Transplants

Saves you 1 year work and time. Have berries this summer.

Keith's 2-yr. Morrison transplants are ready to bear for you this coming summer. We took 1-year bushes last spring, planted them in our nursery rows, cultivated and cared for them all summer and they grew into bushy transplants for you. We save you a whole year when you order 2-yr. transplants.

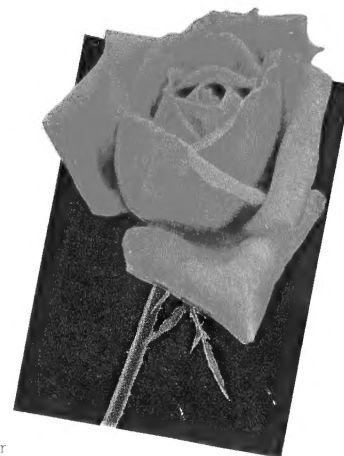

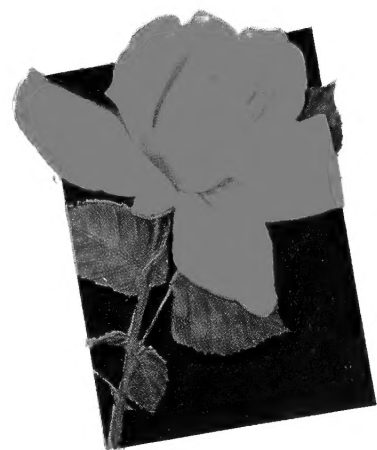

Keith's 2-Yr. Black Raspberry Transplants

By setting them you:

- 1.—Eliminate 1 year's work and care.
- 2.—Eliminate all risk you take when you set 1-yr. plants.
- 3.—Save labor and expense.
- 4.—Get berries this summer.
- 5.—Your planting will escape the first winter's winter-killing of younger plants.

Here you see a 2-yr. Black Raspberry transplant. Note the fruit buds. You save a whole year by setting Keith's 2-yr. transplants this spring.

4 Beautiful Everblooming Roses

All selected for best continuous bloomers, lasting flowers. All 4 are beauties for home use.

MORRISON

The New Black Raspberry Profitable—Productive—Hardy

This new Black Raspberry has been tested throughout the country, and found to be hardy, productive, highly satisfactory for market and home use. There is no guesswork connected with the Morrison, you don't have to "try them out". That's been done. Morrison has all you can expect in a Black Raspberry.

The Berries

Morrison berries are very large, don't crumble, aren't seedy, have pleasing rich lasting flavor, glossy black color. Best for table and home uses, and brings "tops" in markets. This new variety has the highest praises from all who have fruited it, and growers are setting it for their leading black Raspberry.

Here's Morrison "in a Nut Shell"

1. Largest berries.
2. Firm—don't crumble.
3. Meaty berries—not seedy.
4. More quarts per bush than other varieties—big yields.
5. Bushes large, hardy, thrifty.
6. Canes strong—don't break over.
7. Profitable—more money per bush, per acre.

Keith's Thornless Boysenberry (actual size). Note size of these luscious berries. Unexcelled for pies, etc.

RIPENS EARLY

Keith's Thornless Boysenberry begins to ripen its big, beautiful, wine colored berries ten days to two weeks ahead of common thorny Boysenberry. Gives you berries earlier than ever before, and longer.

Here you see Thornless Boysenberry vines (canes) tied up to and trained to wires stapled to posts set 12 feet apart in the row, 1 post to every 2 plants.

BERRIES SWEET

There is no other berry that has the sweet, luscious flavor that you will find in this new berry. Why? Because it's a cross between the Loganberry, the Raspberry and the Blackberry. No other like it. And don't they make luscious pies.

Boysenberries

NEW! A Thornless Boysenberry

Now You can pick and handle Boysenberries without gloves. This new discovery has revolutionized the growing of this luscious wine-red berry. The great drawback before was those vicious thorns. Now the berries can be picked and vines handled without gloves, for the canes and stems of Keith's Thornless Boysenberry plants are absolutely thornless—as smooth as Grape vines.

Berries Large as Plums

The biggest berry ever developed, 1½ inches long, 1 inch wide, often larger. Large as Plums, plump, long, thick, 50 fill a quart. A cross between the Loganberry, Raspberry and Blackberry. They are a rare berry. And they are as easily grown as Raspberries or Blackberries. Oh Boy! And don't they make luscious pies!

Berries Liked by Everybody

Berries wine-red and fully twice as large as Blackberries, up to 2 inches long. Ideal for home uses, have that "Raspberry-Blackberry" flavor, unlike any berry you have ever tasted, liked by everybody. They make the best of pies, jams, etc., and are delicious canned. Commercial canners want them above any other berry. When you taste thornless Boysenberry, either fresh, in pies or canned, you will never be without them—and they are easily grown in your garden or field.

SPECIAL OFFER

Three 2-Year, Ready-to-Bear Thornless Boysenberry plants (see picture at right), the kind that will save you at least a year. Properly pruned for planting. Regular price, \$1.60.
3 for ONLY \$1.45

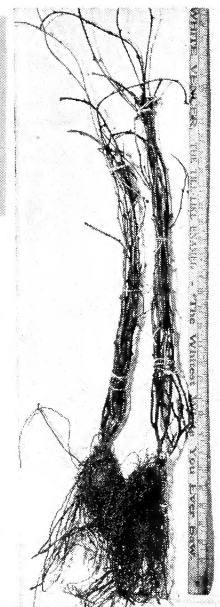

Easy to Grow

Boysenberries can be grown along your backyard or garden fence, on trellises, or on wires stretched between posts. (See picture at left). The plants require no special care, will grow in any garden soil, as long as the weeds and grass are kept out. We suggest mulching, such as for Raspberries, etc. (See page 20.)

(For cultural directions, see page 21.)

Ready-to-Bear Plants

You can save a whole year's time, save the expense of caring for the plants for one year, and have berries a year sooner (have them this summer) by planting Keith's 2-year Boysenberry Transplants. We set the plants out last spring in our nursery rows, cultivated and cared for them all summer, and now we have the 2-year plants for you. They will come to you with the tops properly pruned for planting.

Two-year plants save you at least one year

Keith Plant Nursery

Sawyer, Michigan
